Seeking a needle in a haystack - Precision physics with the BaBar experiment

Friday, 10 October 2008 12:30 (1:00)

Abstract content

The BaBar Collaboration submitted more than 90 new results to ICHEP 2008 - this summer's major conference in high energy physics. In my presentation I will highlight many of these measurements and discuss new results in bottomonium spectroscopy, the decays of charm mesons, the physics of B mesons as well as new measurements on heavy lepton decays.
