## Higgs physics at the terascale

*Tuesday, 7 October 2008 12:30 (1:00)*

### Abstract content

The discovery of a Higgs-like particle at the LHC is highly anticipated. I will review the status of current limits on Higgs boson properties and discuss what we can expect to learn about Higgs couplings at the LHC. The possibility of distinguishing between a Standard Model Higgs boson and other mechanisms for electroweak symmetry breaking will be examined.
