A possible Grand Unification Theory with 331 models.

Wednesday, 8 October 2008 19:00 (2:00)

Abstract content

Summary

The 331 models with three families appear in a natural way by using the anomaly cancellations. In the present work we want to study the possibility to unify this class of models with three families into a $SU(7)$ gauge group. The fermion contents are given by 7, 21, and 35 irreducible representations.
