Construction of a Didactic Cloud Chamber for Particle Tracking

Wednesday, 8 October 2008 19:00 (2:00)

Abstract content

Summary

I will present the description of a small, economic, easy-to-build, didactic cloud chamber that we have successfully built, as a Final Course Project, in a “Laboratorio de Fisica Moderna” course at IFUG. I will show pictures of some of the hundreds of very clear tracks that we were able to observe in the chamber.
