

Long Term Performance Meeting  
July, 26th 2018 – 14:00 CEST

## Updates and status of the FD DataBases

Lorenzo Perrone  
(reported by Rossella Caruso)

# Data Processing

- DATA SET 2004-2017

- ✓ processed using the preliminary Aerosol DB by Laura Valore
- ✓ processed using the preliminary Aerosol DB by Violet from Adelaide's group

- DATA SET 2004-2015

- ✓ processed using the standard DB

The data processing of all three samples requires about  
10 days

# Strategy

- The last data processing is useful to compare results on a common data sample
- Ideally the “Violet”’s DB should give back same results on the common data
- Using the same version of OFFLINE to avoid differences due the software version
- So far no time to analyse the given results...

# Last (today) NEWS!

- This week Bruce & Violet (Adelaide's group) uploaded cloud camdata for all of 2017 to the DB.
- In the next week or so, they should upload more data, up to the end of April 2018
- So Lorenzo must re-process the 2017-2018 dataset with the new last cloud DB
- Results for the next Long Term Performance meeting.
