

AoP (A/P) from air showers  
at zeniths of  $58.5^\circ - 76.5^\circ$

Michael Schimp, BUW, 2019 Jan 17

Very basic selection:  
 Removed bad PMTs, stations  
 with saturated PMT, bad periods

Top down signal selection,  
 direct light removal

- Transition from increasing AoP (more vertical showers) to decreasing AoP (more horizontal showers)
- Next Step: Go more horizontal to get more global behavior (started preparing yesterday)
