

## Z<sub>cs</sub>(3985) and relevant BESIII Z<sub>c</sub> studies

### Content

Recently, BESIII reported observation of the structure at the kinematical threshold in the  $D_{s1}^0 + D_{s1}^-$  mass distribution, which is interpreted as a tetraquark candidate, called  $Z_{cs}(3985)^0$ . This is the first candidate for a tetraquark meson containing hidden-charm with non-zero strangeness. BESIII has been devoting resources to the study of  $Z_{cs}$  states.
