Recent results from BESIII

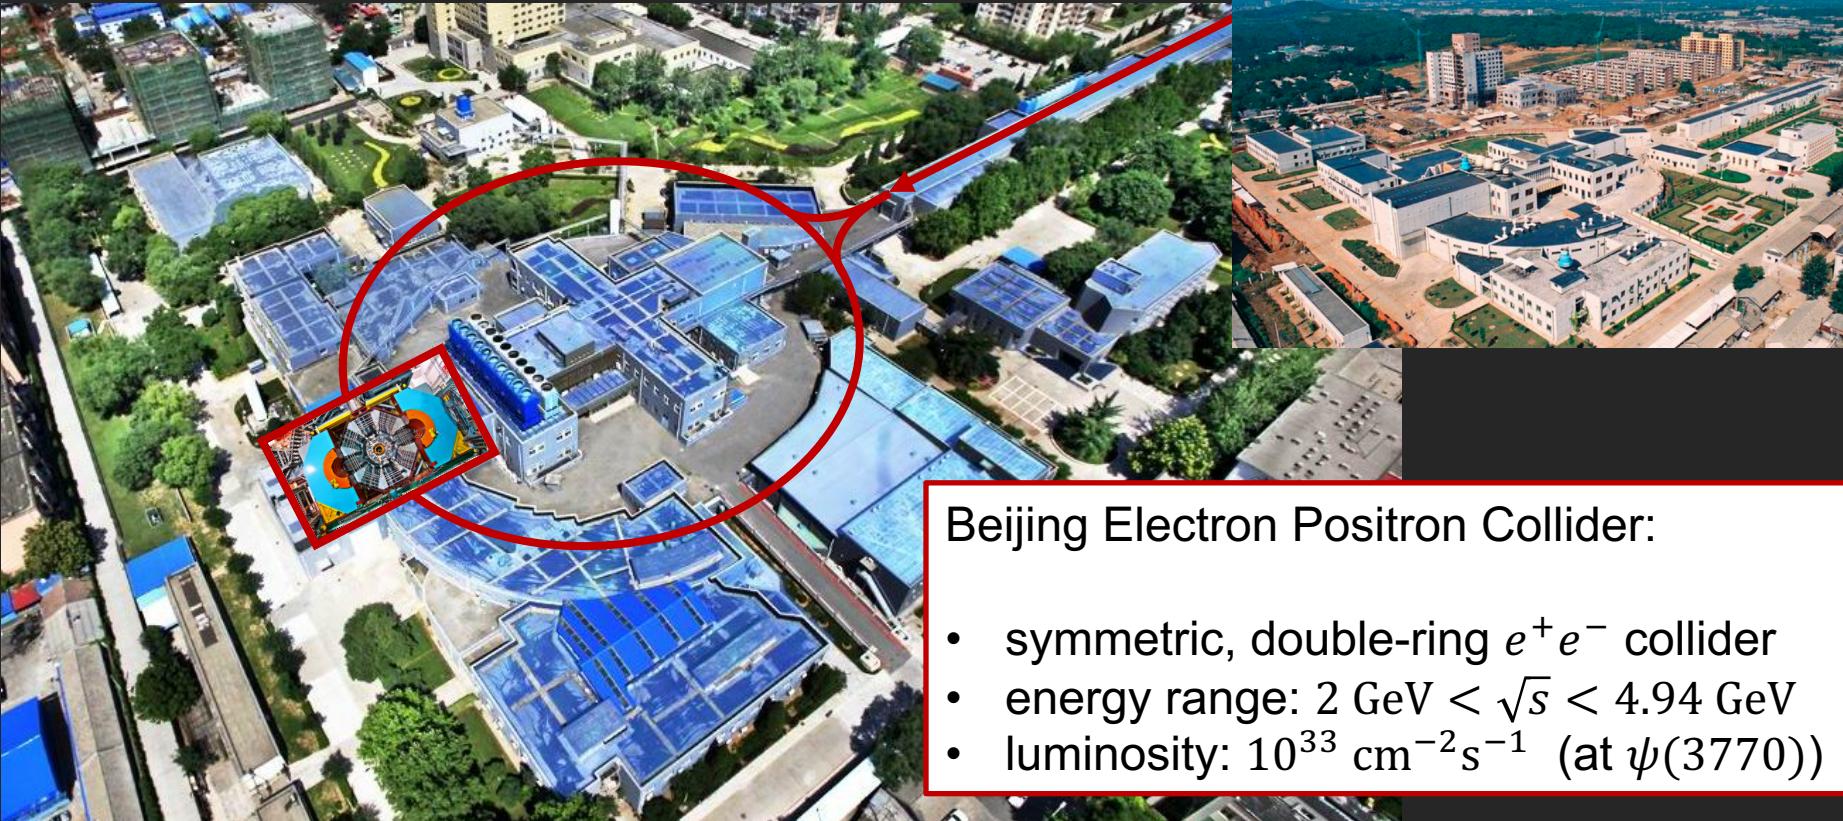

Nils Hüsken
on behalf of the BESIII Collaboration

19th International Conference on Hadron Spectroscopy and Structure

INDIANA UNIVERSITY BLOOMINGTON

BEPCII

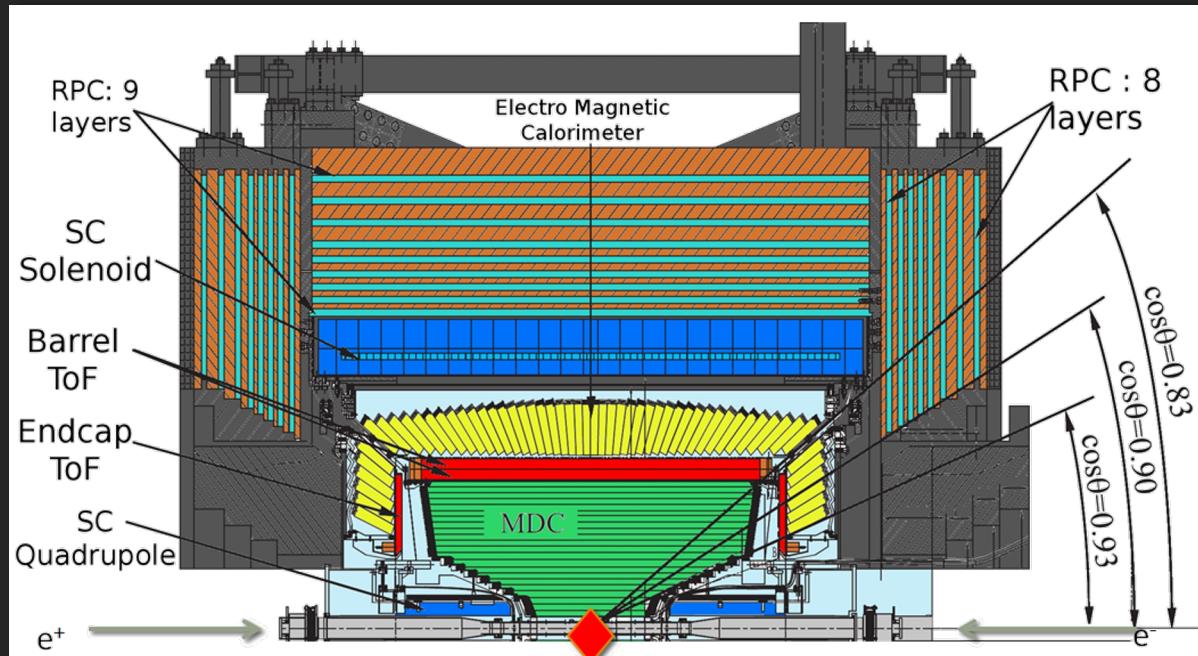

Beijing Electron Positron Collider:

- symmetric, double-ring e^+e^- collider
- energy range: $2 \text{ GeV} < \sqrt{s} < 4.94 \text{ GeV}$
- luminosity: $10^{33} \text{ cm}^{-2}\text{s}^{-1}$ (at $\psi(3770)$)

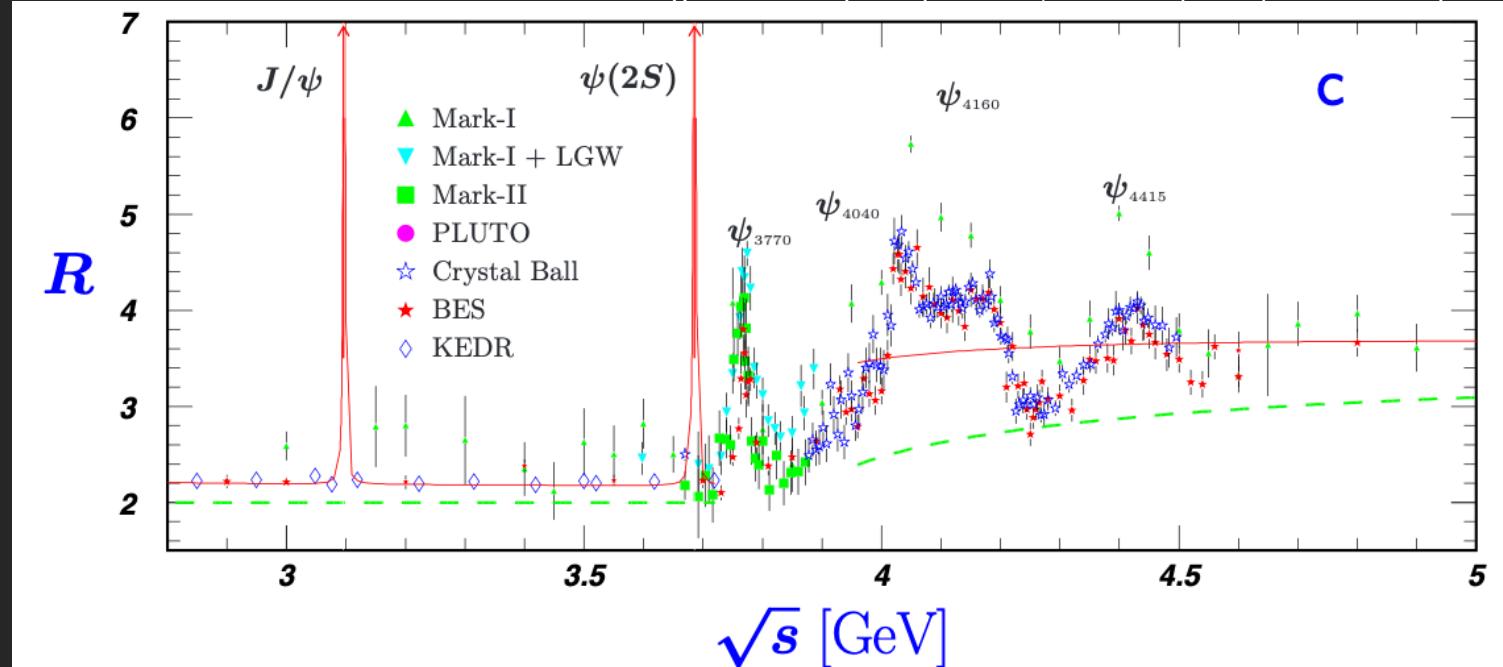

BESIII

- MDC: drift chamber in 1 T magnetic field
- TOF: plastic scintillator / MRPC based time-of-flight system
- EMC: electromagnetic calorimeter
- RPC: resistive plate chambers for muon ID

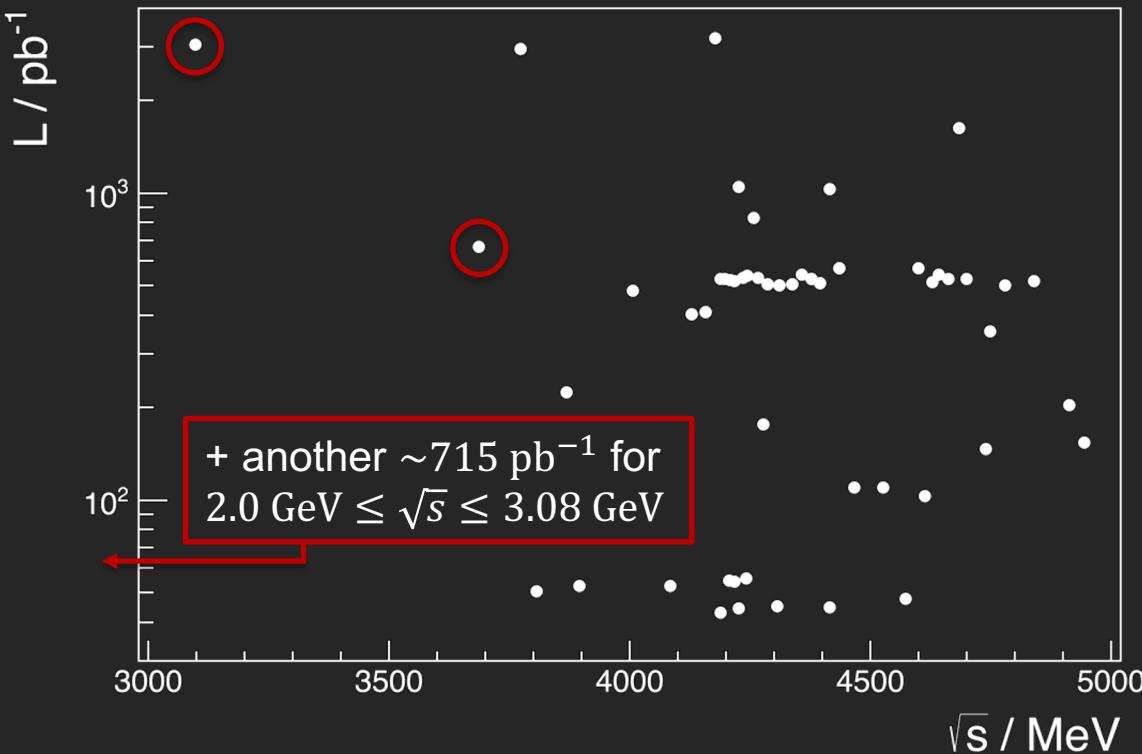

BESIII datasets

Prog. Theor. Exp. Phys. 2020, 083C01 (2020) and 2021 update

energy range: $2 \text{ GeV} < \sqrt{s} < 4.94 \text{ GeV}$

BESIII datasets

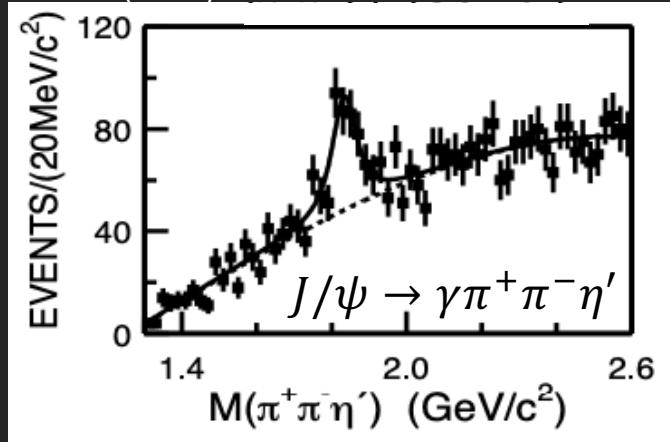

- $10^{10} J/\psi$ decays
- $448 \cdot 10^6 \psi(2S)$ decays
(with another $2.3 \cdot 10^9$ recently finished)
→ light hadron spectroscopy & decays, charmonium decays, hyperon physics, ...

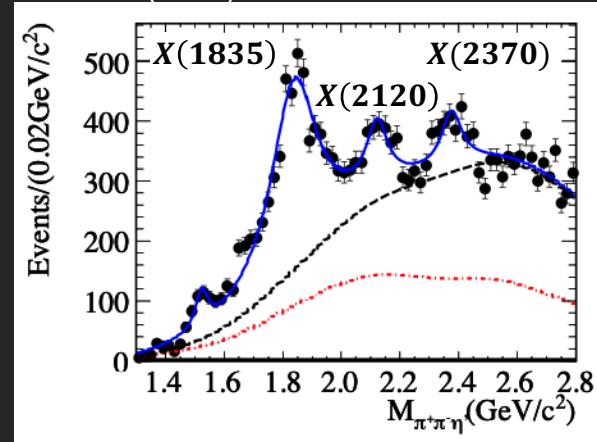

see other talks:
07/26 11:15, 11:40
07/27 11:40

On $X(1835), X(2120), X(2370)$

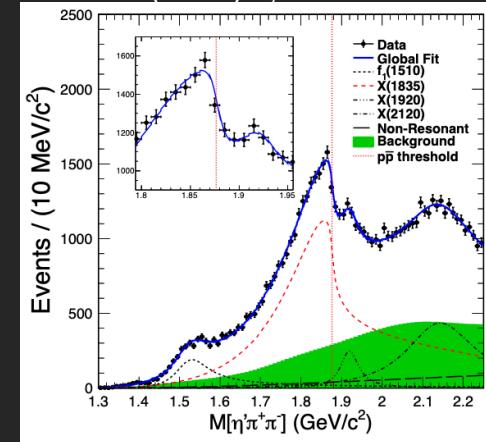

PRL 95 (2005) 262001

PRL 106 (2011) 072002

PRL 117 (2016) 4, 042002

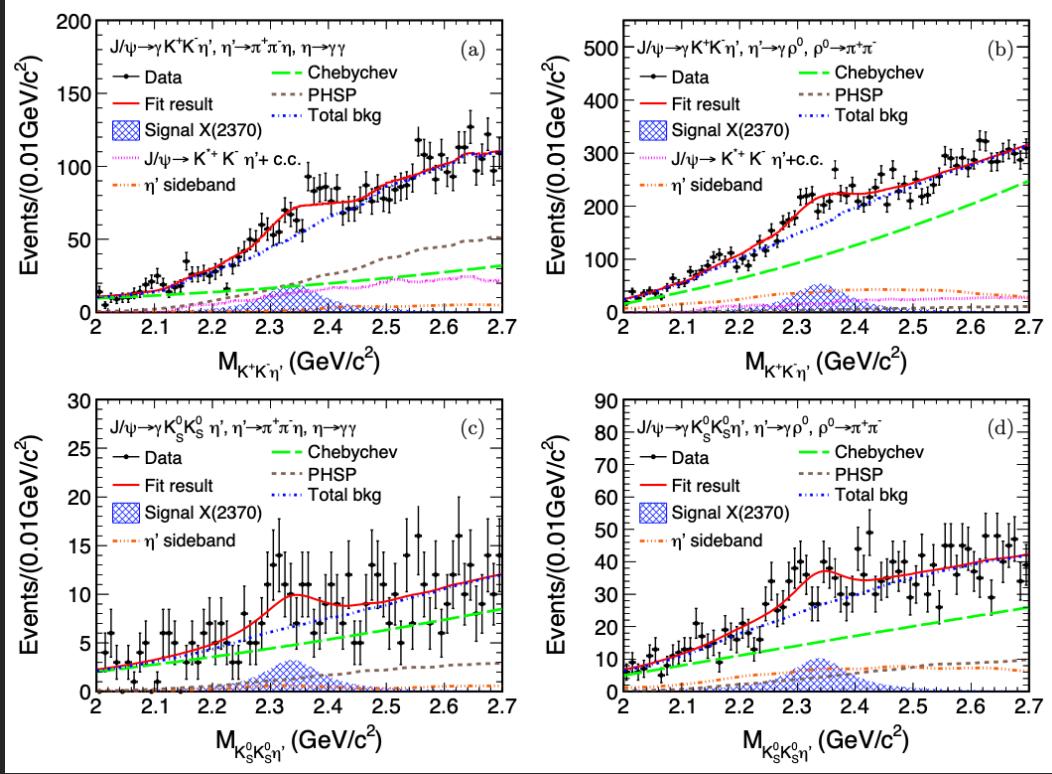

$$58 \cdot 10^6 J/\psi$$

$$225 \cdot 10^6 J/\psi$$

$$1.3 \cdot 10^9 J/\psi$$

- $X(1835)$: seen in $\gamma\eta'\pi^+\pi^-$, $\gamma\eta K_S^0 K_S^0$, $\gamma\gamma\phi$, $\gamma\omega\phi$
 - similar state in: $\gamma p\bar{p}$, $\gamma 3(\pi^+\pi^-)$, $\omega\eta\pi^+\pi^-$ (recoiling off an ω)
 - what about the other peaks?
- factor of 8 increase in statistics upcoming!

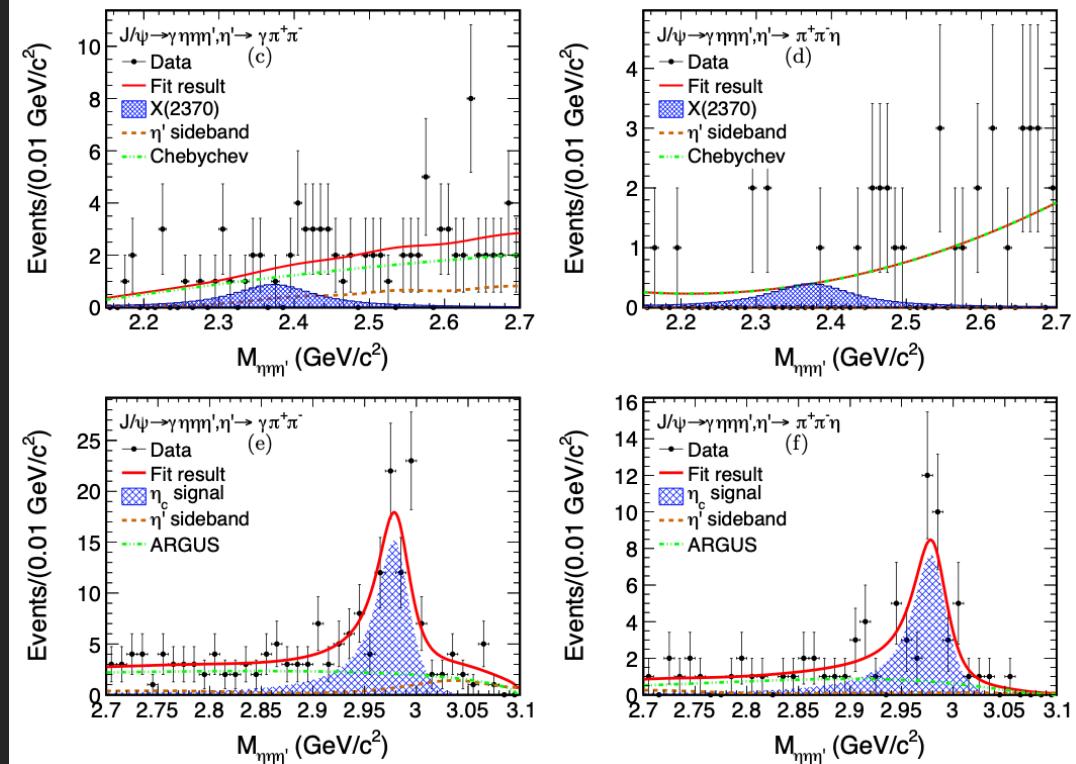

On $X(1835)$, $X(2120)$, $X(2370)$

$J/\psi \rightarrow \gamma K\bar{K}\eta'$:

- based on $1.3 \cdot 10^9 J/\psi$
- simultaneous fit to $\eta' \rightarrow \eta\pi^+\pi^-$ and $\eta' \rightarrow \gamma\pi^+\pi^-$, and $J/\psi \rightarrow \gamma K^+K^-\eta'$ and $J/\psi \rightarrow \gamma K_S^0\bar{K}_S^0\eta'$
- 8.3σ for $X(2370) \rightarrow K\bar{K}\eta'$
- no indication for $X(2120) \rightarrow K\bar{K}\eta$

On $X(1835)$, $X(2120)$, $X(2370)$

$J/\psi \rightarrow \gamma \eta \eta \eta'$:

- based on $1.3 \cdot 10^9 J/\psi$
- simultaneous fit to $\eta' \rightarrow \eta \pi^+ \pi^-$ and $\eta' \rightarrow \gamma \pi^+ \pi^-$
- no signal of $X(2370) \rightarrow \eta \eta \eta'$
- first observation of $\eta_c \rightarrow \eta \eta \eta'$

more light meson spectroscopy:
Shuangshi Fang, 07/26 11:15

Light meson decays

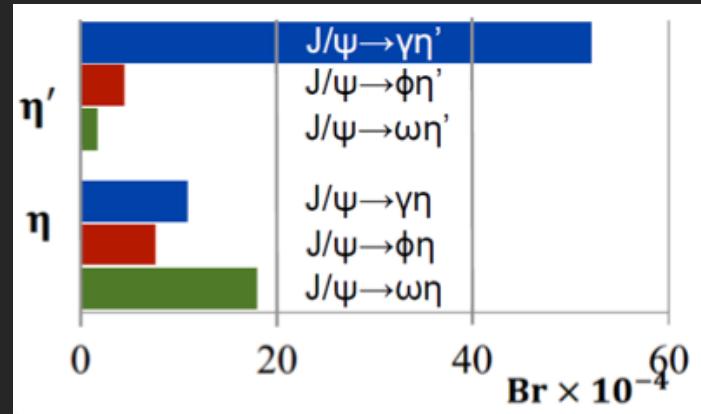

- radiative J/ψ decays provide a clean source of η, η' mesons

$$\begin{aligned} BR(J/\psi \rightarrow \gamma\eta) &= (1.108 \pm 0.027) \cdot 10^{-3} & \xrightarrow{\frac{1.3 \cdot 10^9 J/\psi}{(10^{10} J/\psi)}} 1.4 \cdot 10^6 \eta & (1.1 \cdot 10^7 \eta) \\ BR(J/\psi \rightarrow \gamma\eta') &= (5.25 \pm 0.07) \cdot 10^{-3} & & 6.8 \cdot 10^6 \eta' & (5.3 \cdot 10^7 \eta') \end{aligned}$$

- ideal testbed to study:

- low energy QCD
- χ PT predictions
- symmetry violations
- ...

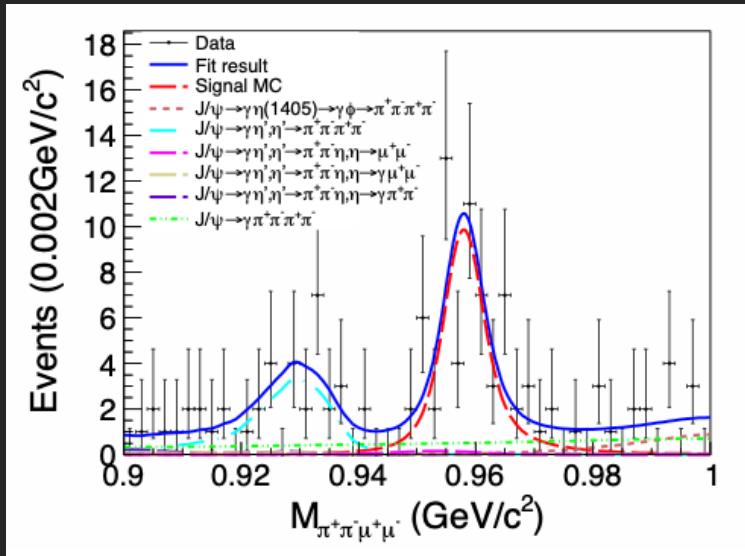

→ see yesterday's talk by Rongsheng Shi

Light meson decays: $\eta' \rightarrow \pi^+ \pi^- l^+ l^-$

$$\eta' \rightarrow \pi^+ \pi^- \mu^+ \mu^-:$$

$$BR = (1.93 \pm 0.33 \pm 0.18) \cdot 10^{-5}$$

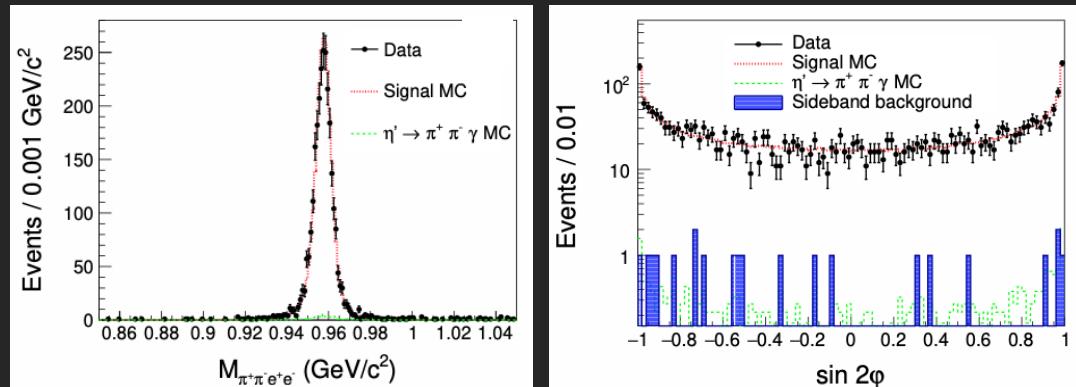

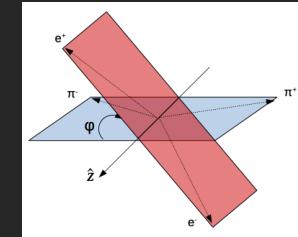

Phys. Rev. D 103, 072006 (2021)

$$\eta' \rightarrow \pi^+ \pi^- e^+ e^-:$$

$$BR = (2.42 \pm 0.05 \pm 0.08) \cdot 10^{-3}$$

- interference between CP-allowed M1 transition and CP-violating transition would procure asymmetry A_φ
- $A_\varphi = (2.9 \pm 3.7 \pm 1.1)\%$

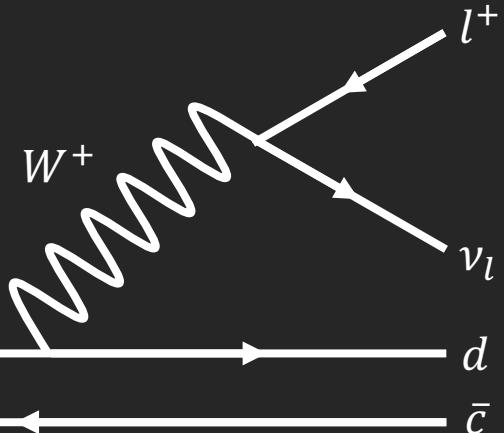

Phys. Rev. D 103, 092005 (2021)

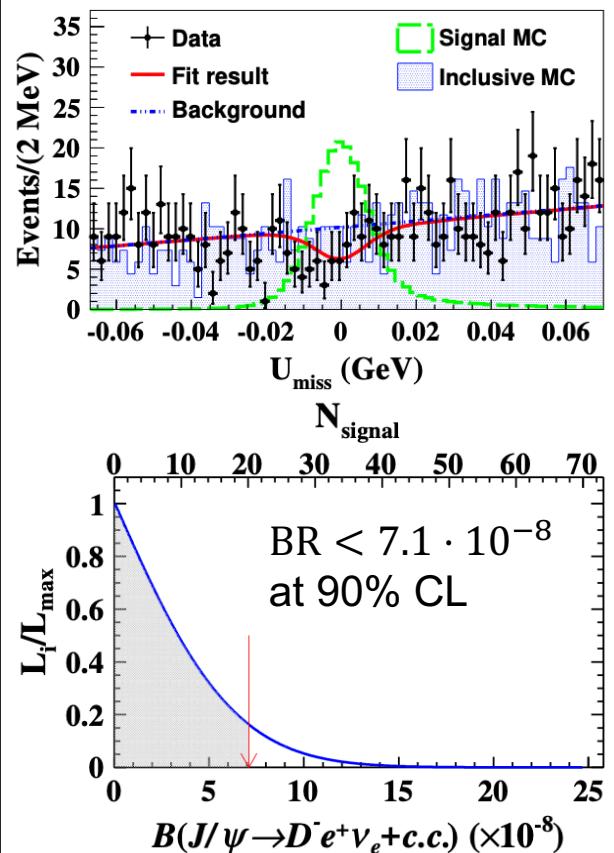

INDIANA UNIVERSITY BLOOMINGTON

Search for J/ψ weak decays

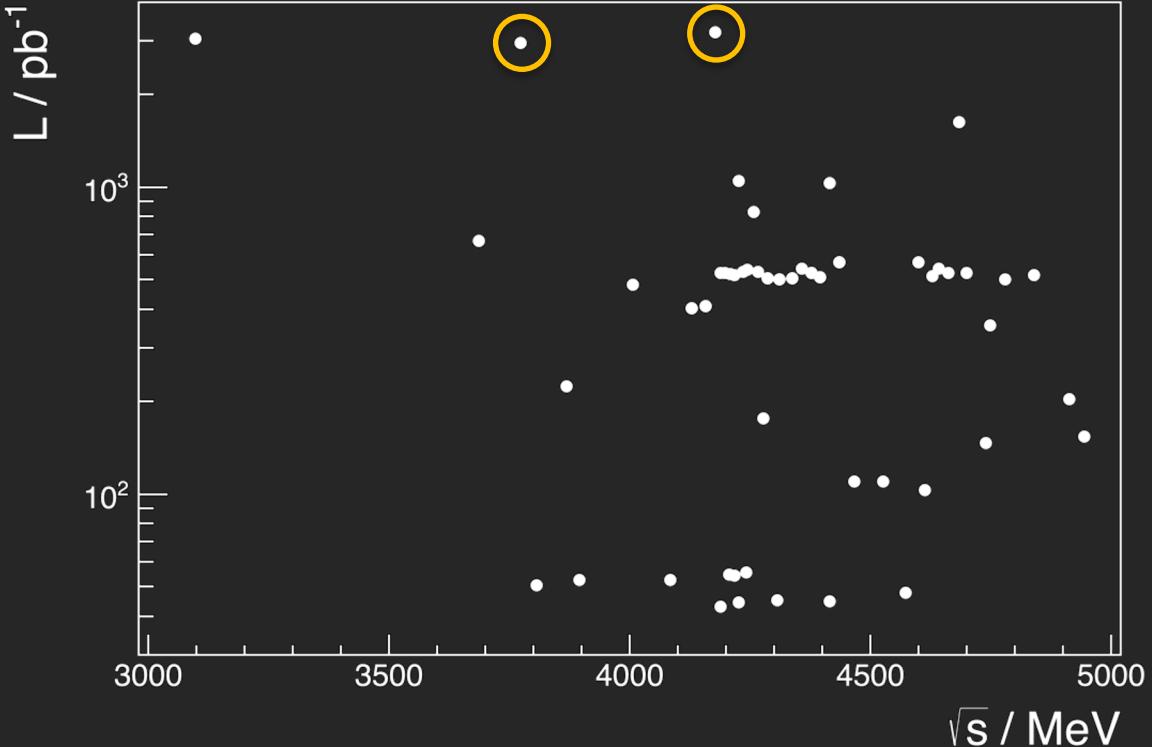

JHEP 06 (2021) 157

- standard model prediction: $\text{BR} \sim 10^{-11}$
- several BSM: predict larger BR up to $\sim 10^{-5}$
- one of the first published results using $10^{10} J/\psi$ events

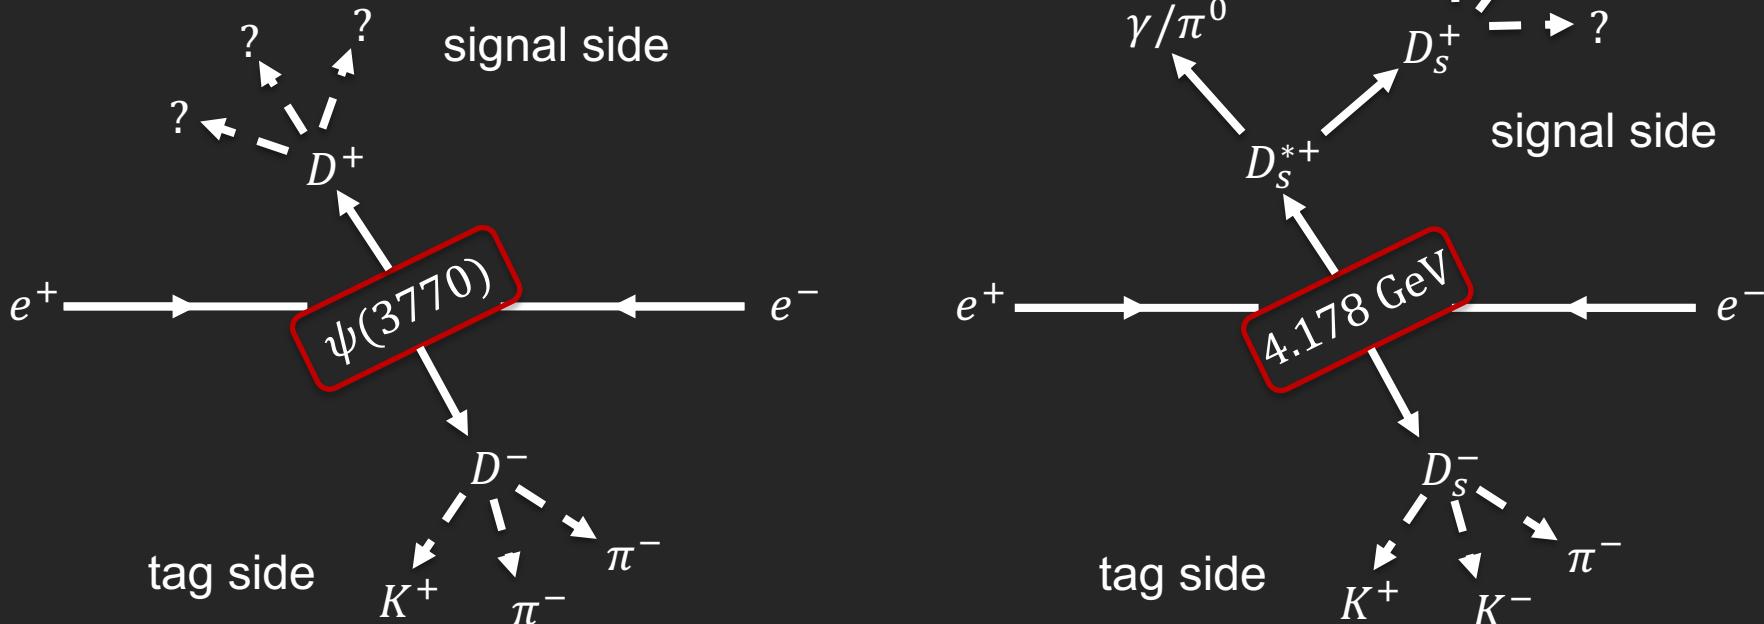

BESIII datasets

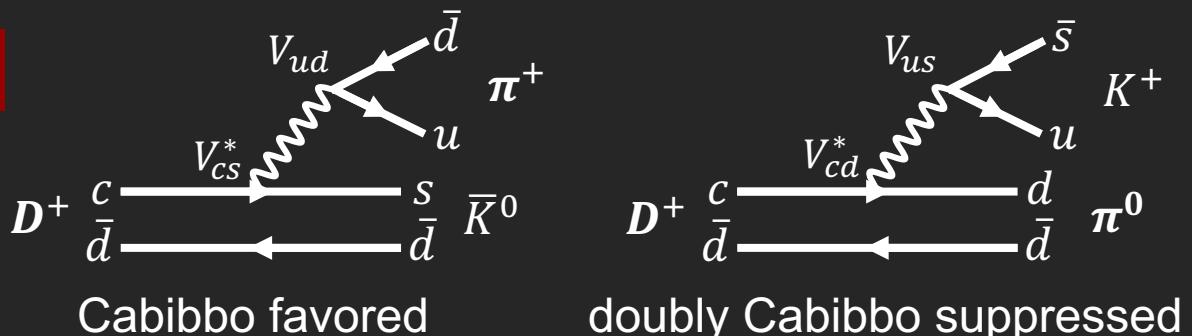

- $\sim 2.9 \text{ fb}^{-1}$ at $\psi(3770)$ (to be upgraded to $\sim 20 \text{ fb}^{-1}$ in the near future)
 - $\sim 3.2 \text{ fb}^{-1}$ at $\sqrt{s} = 4.178 \text{ GeV}$
- $D_{(s)}$ meson decays,
quantum-correlated
 $D^0\bar{D}^0$ pairs, ISR and
 $\gamma\gamma$ processes, ...

Open charm production

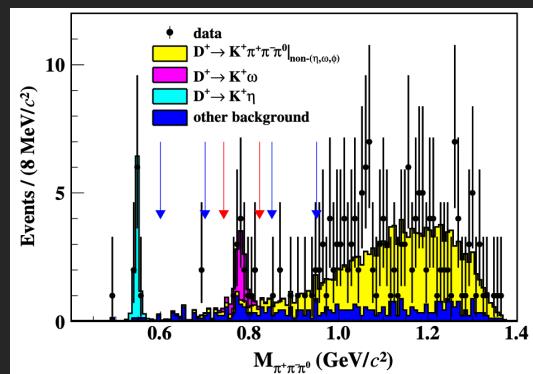

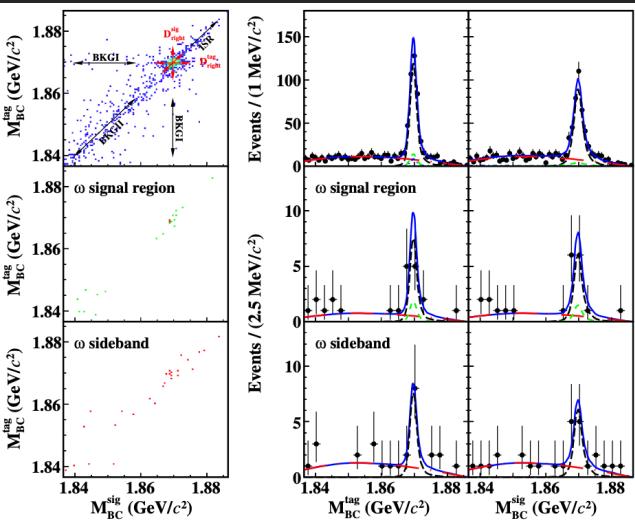

$$D^+ \rightarrow K^+ \pi^+ \pi^- \pi^0$$

- expectation: $\frac{Br(DCS)}{Br(CF)} \sim \tan^4 \theta_c \sim 0.29\%$
- $Br(D^+ \rightarrow K^+ \pi^+ \pi^- \pi^0) = (1.13 \pm 0.08 \pm 0.03) \cdot 10^{-3}$
- $\rightarrow \frac{Br(D^+ \rightarrow K^+ \pi^+ \pi^- \pi^0)}{Br(D^+ \rightarrow K^- \pi^+ \pi^+ \pi^0)} = (1.81 \pm 0.15)\%$

Tags:
 $D^- \rightarrow K^+ \pi^- \pi^-$
 $D^- \rightarrow K_S^0 \pi^-$
 $D^- \rightarrow K^+ \pi^- \pi^- \pi^0$

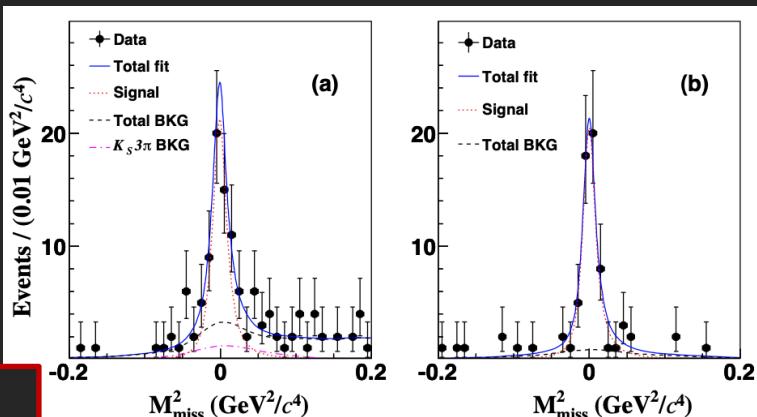

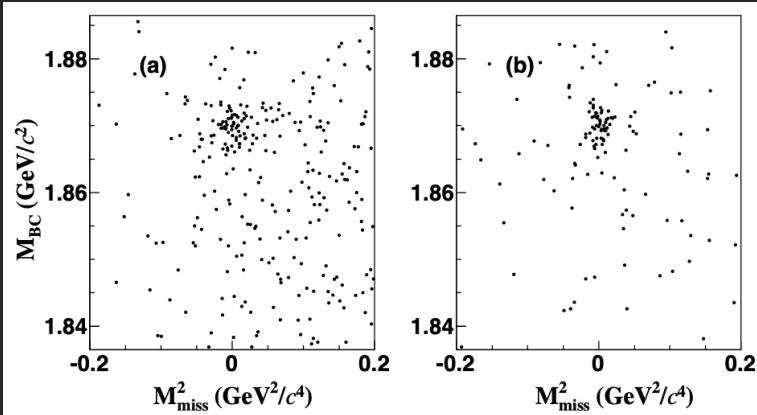

$D^+ \rightarrow K^+ \pi^+ \pi^- \pi^0$

- new measurement using semi-leptonic instead of hadronic tags
- $\text{Br}(D^+ \rightarrow K^+ \pi^+ \pi^- \pi^0) = (1.03 \pm 0.12 \pm 0.06) \cdot 10^{-3}$

$$\rightarrow \frac{\text{Br}(D^+ \rightarrow K^+ \pi^+ \pi^- \pi^0)}{\text{Br}(D^+ \rightarrow K^- \pi^+ \pi^+ \pi^0)} = (1.65 \pm 0.21)\%$$

- confirms unexpectedly large branching ratio
- first demonstration of semi-leptonic tag, useful for D^0 decays in the future

Tags:
 $D^- \rightarrow K^0 e^- \bar{\nu}_e$
 $D^- \rightarrow K^+ \pi^- e^- \bar{\nu}_e$

more on DCS decays:
 Xiang Pan, 07/28 07:25

$D_s^+ \rightarrow \pi^+ \pi^+ \pi^- \eta$

- first measurement of $Br(D_s^+ \rightarrow \pi^+ \pi^+ \pi^- \eta) = (3.12 \pm 0.13 \pm 0.09)\%$
- amplitude analysis reveals dominant $a_1(1260)^+ \eta$ contribution
- observation of weak annihilation $D_s^+ \rightarrow a_0(980)^+ \rho(770)^0$

Amplitude	Phase	FF(%)
$a_1(1260)^+ (\rho(770)^0 \pi^+) \eta$	0.0(fixed)	$55.4 \pm 3.9 \pm 2.0$
$a_1(1260)^+ (f_0(500) \pi^+) \eta$	$5.0 \pm 0.1 \pm 0.1$	$8.1 \pm 1.9 \pm 2.1$
$a_0(980)^+ \rho(770)^0$	$2.5 \pm 0.1 \pm 0.1$	$6.7 \pm 2.5 \pm 1.5$
$\eta(1405)(a_0(980)^- \pi^+) \pi^+$	$0.2 \pm 0.2 \pm 0.1$	$0.7 \pm 0.2 \pm 0.1$
$\eta(1405)(a_0(980)^+ \pi^-) \pi^+$	$0.2 \pm 0.2 \pm 0.1$	$0.7 \pm 0.2 \pm 0.1$
$f_1(1420)(a_0(980)^- \pi^+) \pi^+$	$4.3 \pm 0.2 \pm 0.4$	$1.9 \pm 0.5 \pm 0.3$
$f_1(1420)(a_0(980)^+ \pi^-) \pi^+$	$4.3 \pm 0.2 \pm 0.4$	$1.7 \pm 0.5 \pm 0.3$
$[a_0(980)^- \pi^+]_S \pi^+$	$0.1 \pm 0.2 \pm 0.2$	$5.1 \pm 1.2 \pm 0.9$
$[a_0(980)^+ \pi^-]_S \pi^+$	$0.1 \pm 0.2 \pm 0.2$	$3.4 \pm 0.8 \pm 0.6$
$[f_0(980) \eta]_S \pi^+$	$1.4 \pm 0.2 \pm 0.3$	$6.2 \pm 1.7 \pm 0.9$
$[f_0(500) \eta]_S \pi^+$	$2.5 \pm 0.2 \pm 0.3$	$12.7 \pm 2.6 \pm 2.0$

BESIII datasets

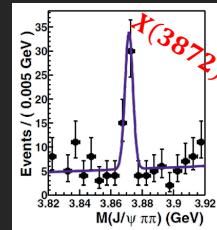

- $\sim 22 \text{ fb}^{-1}$ at various \sqrt{s} in the XYZ region
 - spectroscopy of XYZ -states, XYZ -decays, open-charm production, charmed baryons, ...
- see other talks:
07/28 09:25
07/29 09:25, 11:15
07/30 09:45

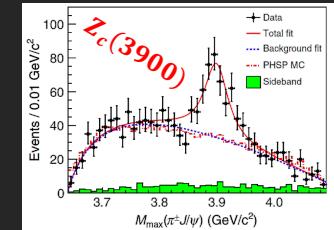

Charmonium-like exotic states

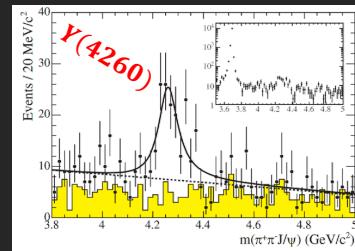

- conventional charmonia ($c\bar{c}$) fit well with potential model calculations
- several unexpected states observed

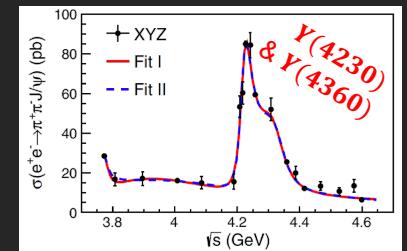

PRL 91, 262001 (2003)

PRL 110 (2013) 252001

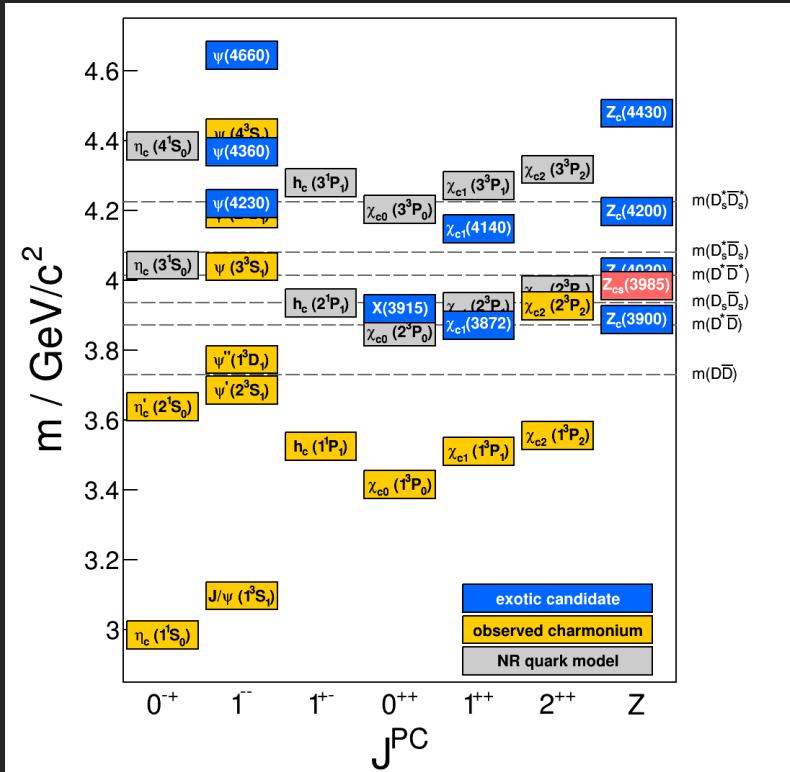

PRL 95 (2005) 142001

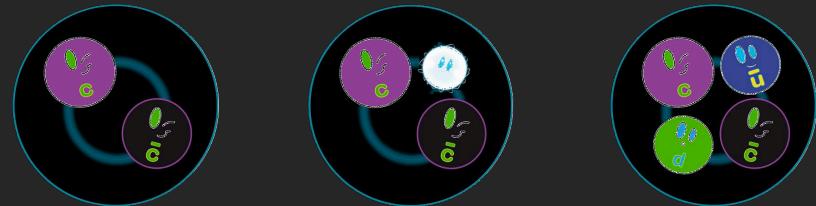

PRL 118 (2017) 9, 092001

Charmonium-like exotic states

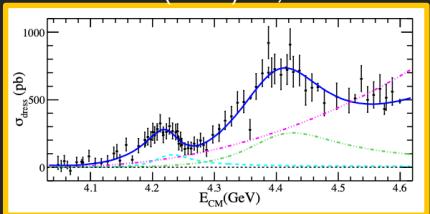

- charmonium-like states:
 - supernumerary
 - do not fit into spectrum
 - strong couplings to hidden charm channels
 - *exotic* decays (e.g. $Z_c^\pm \rightarrow J/\psi \pi^\pm$)
- nature of these states is still unclear

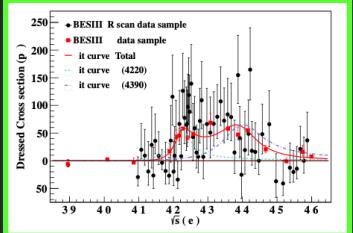

<https://physicsmore.blogspot.com>

The Y- (or ψ -) states

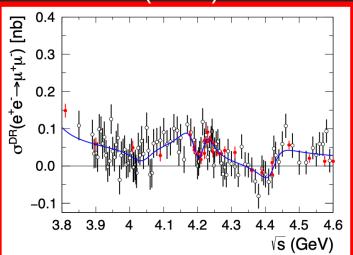

PRL 122 (2019) 10, 102002

The Y- (or ψ -) states

$e^+e^- \rightarrow \eta J/\psi$:

- updated measurement using 13.1 fb^{-1} of data in the range $3.8 \text{ GeV} \leq \sqrt{s} \leq 4.6 \text{ GeV}$
- η reconstructed in $\gamma\gamma$, $\pi^+\pi^-\pi^0$
- fit with three resonances:
 - $\psi(4040)$, fixed to world-average
 - two additional, found compatible with $\psi(4230)$ and $\psi(4360)$

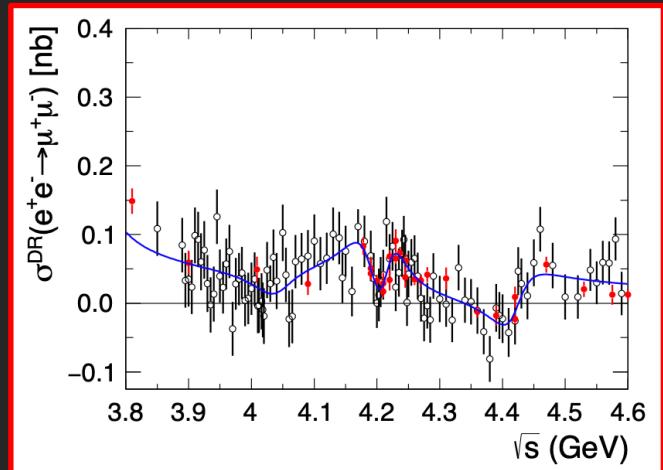

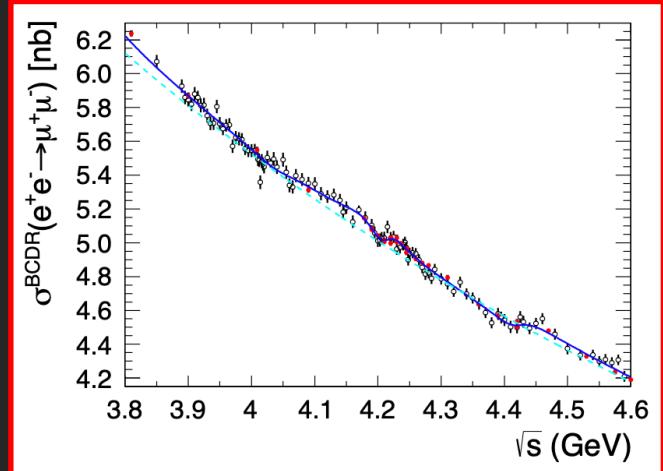

PRD 102 (2020) 3, 031101

The Y- (or ψ -) states

$e^+e^- \rightarrow \mu^+\mu^-$:

- using 133 data samples in the range $3.8 \text{ GeV} \leq \sqrt{s} \leq 4.6 \text{ GeV}$ with $L_{int} = 13.2 \text{ fb}^{-1}$
- measurement of $\Gamma_{\mu\mu}$ for $\psi(4040)$, $\psi(4160)$ and $\psi(4415)$
- observation of an additional state with
 $m = (4216.7 \pm 8.9 \pm 4.1) \text{ MeV}$
 $\Gamma = (47.2 \pm 22.8 \pm 10.5) \text{ MeV}$
 $\Gamma_{\mu\mu} = (1.53 \pm 1.26 \pm 0.54) \text{ keV}$
(1 of 8 ambiguous solutions)

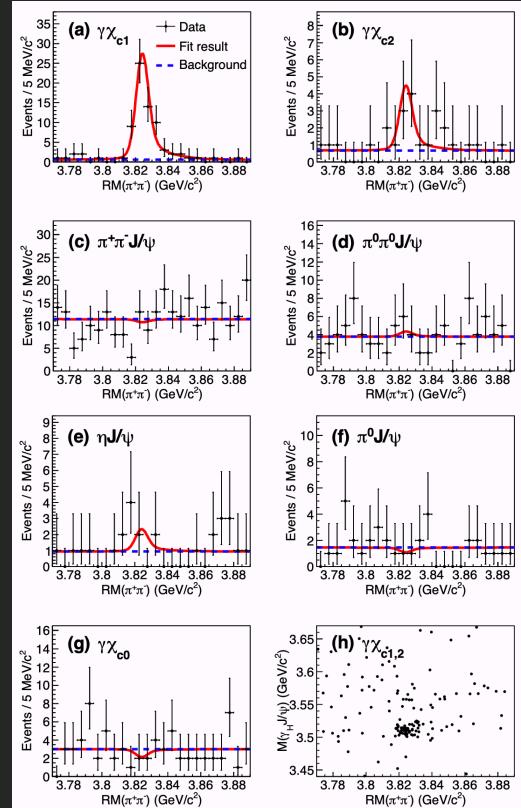

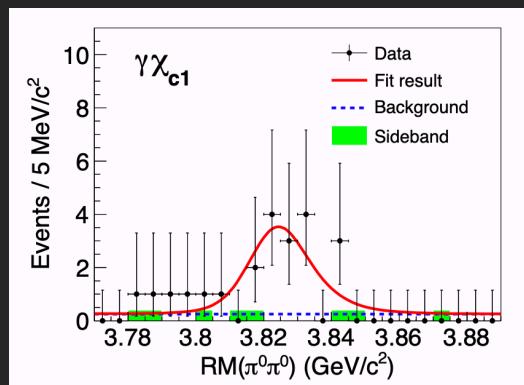

$\psi_2(3823)$ – the $\psi(1^3D_2)$ state?

PRD 103, L091102 (2021)

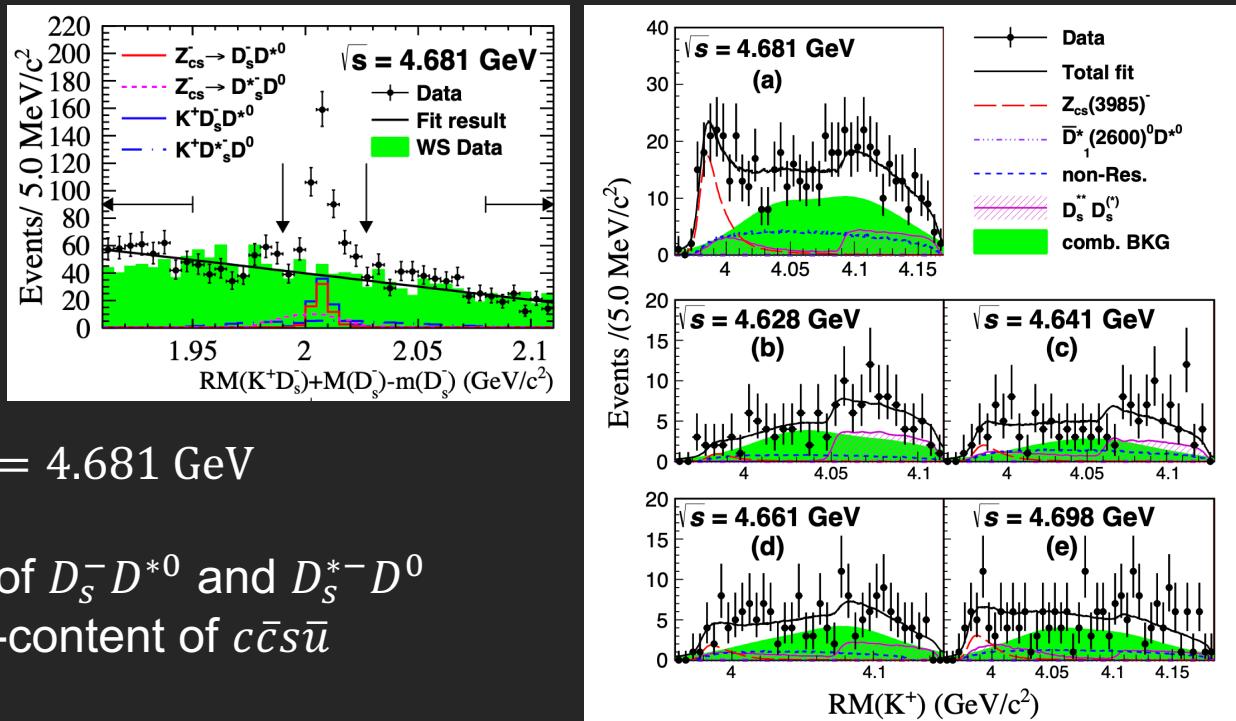

$$e^+ e^- \rightarrow \pi\pi\psi_2(3823):$$

- search for various (new) decay modes of the $\psi_2(3823)$
- first evidence for $\psi_2(3823) \rightarrow \gamma\chi_{c2}$
- first evidence for $e^+ e^- \rightarrow \pi^0\pi^0\psi_2(3823)$ with $\psi_2(3823) \rightarrow \gamma\chi_{c1}$

The $Z_{cs}(3985)$ in $e^+e^- \rightarrow K^+(D_s^- D^{*0} + D_s^{*-} D^0)$

- partial reconstruction method: K^+, D_s^-
- using 5 new datasets above 4.6 GeV
- 5.3σ excess close to threshold for data at $\sqrt{s} = 4.681$ GeV
- coupling to at least one of $D_s^- D^{*0}$ and $D_s^{*-} D^0$ suggests minimal quark-content of $c\bar{c}s\bar{u}$

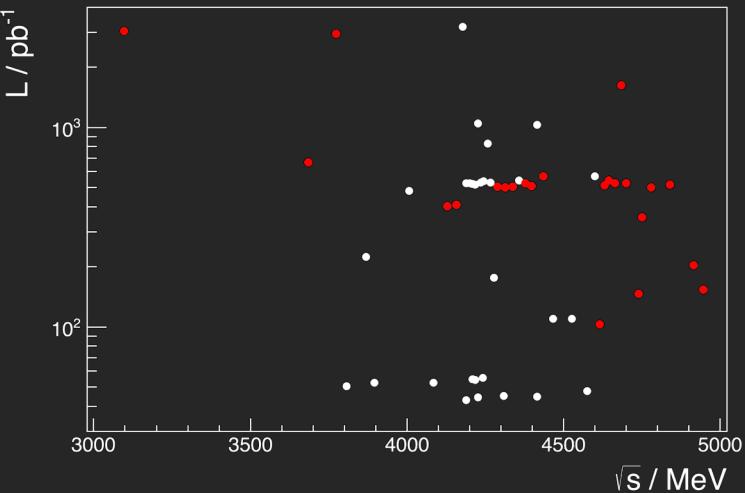

→ see talk by Ronggang Ping 07/29 11:15

PRL 126, 102001 (2021)

Future perspectives

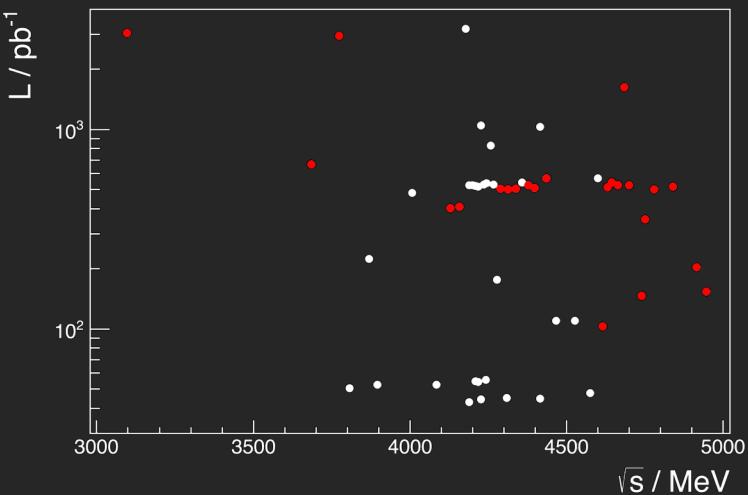

$10^{10} J/\psi$ and $2.7 \cdot 10^9 \psi(2S)$:

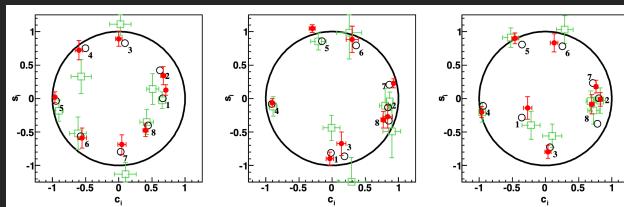

- detailed studies of scalar and pseudo-scalar glueball candidates
(see also talks by A. Rodas, A. Sarantsev, E. Klempf)
- search for hybrid mesons, e.g. in χ_{c1} decays
- many more opportunities:
 - baryon spectroscopy
 - hyperon physics see talks by Liang Yan, 07/27 11:15
 - η_c and χ_{cJ} decays Xiongfei Wang 07/30 11:15
 - ...

Future perspectives

20 fb^{-1} at the $\psi(3770)$:

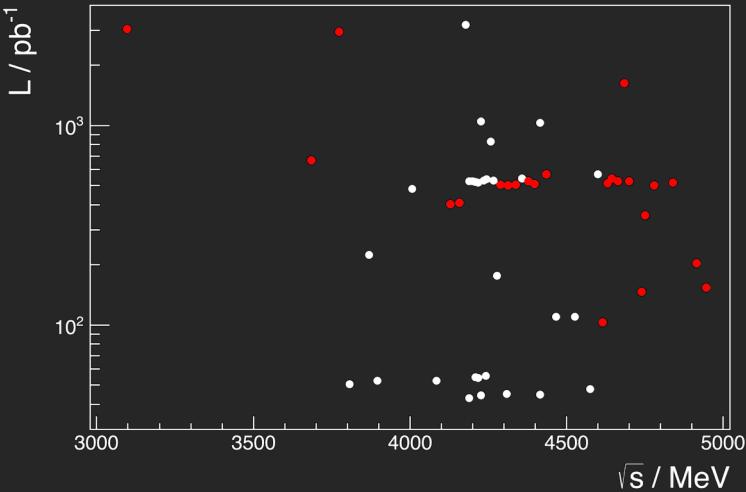

- precise charm and flavour physics
- quantum correlated $D^0\bar{D}^0$ pairs
 - strong phase measurement as important input to study CKM angle γ in $B \rightarrow DK$

PRD 101, 112002 (2020)
PRL 124, 241802 (2020)
PRD 102, 052008 (2020)

- source of ISR and $\gamma^{(*)}\gamma^{(*)}$ events
 - exclusive cross sections
 - transition form factors
- $\left. \right\} g_\mu - 2$

Future perspectives

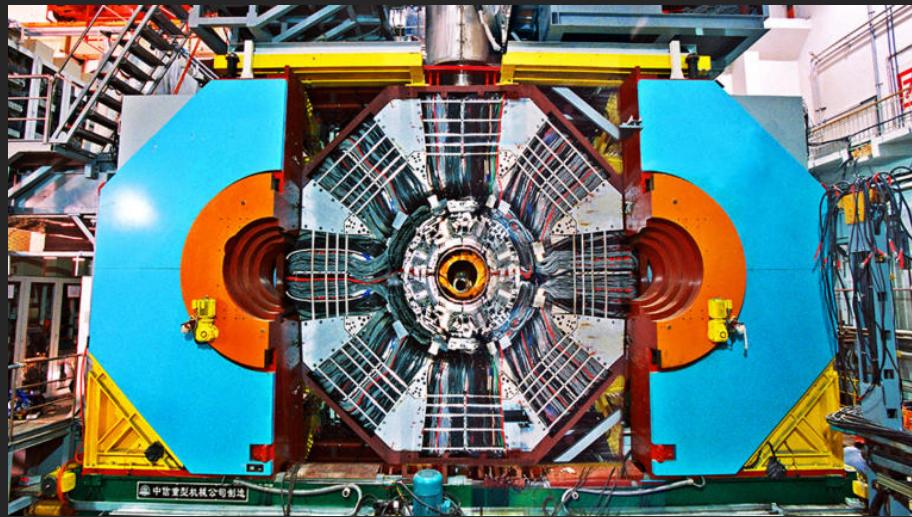

new data above 4 GeV:

- filled up some blank spaces in the $\psi(4230)$, $\psi(4360)$ region
- new data between 4.6 GeV and 4.95 GeV
→ $Z_{cs}(3985)$ as first result
- production of charmed baryons
 $\Lambda_c \bar{\Lambda}_c$, $\Sigma_c \bar{\Sigma}_c$, $\Xi_c \bar{\Xi}_c$
- more surprises to come in the XYZ region?

Summary

- BESIII is taking data since 2008
- broad physics reach
 - light hadron spectroscopy & decays
 - open charm physics
 - (exotic) charmonia
 - precision measurements (R , TFF, ...)
 - ...
- several new data sets currently being analyzed
 - first exciting results from new J/ψ and XYZ data
 - many analyses in progress, plenty of results to come
- data taking is ongoing
 - new: $2.3 \cdot 10^9 \psi(2S)$, soon: 20 fb^{-1} at the $\psi(3770)$
