Status of FD star track analysis

- Several on going activities to improve the FD star track analysis:
  - Implementation of **Cal. A data taken with open shutters**
  - Tuning of 2D PSF parameters as a function of time
  - Accurate evaluation of both statistical and systematic errors
  - …

- Possible additional cross checks with:
  - Simultaneous star observations with other instruments (FRAM, Cloud Camera)
  - Simulation of star tracks with FD Montecarlo code

- In order to prepare a more complete overview of the method and, eventually, a journal paper, suggestions and comments on the already existing documents (papers, GAP notes or presentations) are welcomed!
