

XII Mexican Workshop on Particles and Fields 2009

Thursday 05 November 2009 - Friday 13 November 2009

Mazatlán, México

Book of Abstracts

Contents

Effective gluon propagator from a Fourier transform of the cot confinement potential	1
Introduction to Grand Unification I	1
Hadrons Physics and Continuum Strong-QCD I	1
Low energy QCD and chiral symmetry I	1
Probability and Statistics for High Energy Physics I	1
Introduction to warped extradimensions and EWSB I	1
Quantum Field Theory on the Lattice I	2
Discussion	2
Neutrino Oscillations: Introduction, Status and Outlook I	2
Hadrons Physics and Continuum Strong-QCD II	2
Violations of Einstein's relativity : Motivation, theory and phenomenology I	2
Low energy QCD and chiral symmetry II	2
Neutrino Oscillations: Introduction, Status and Outlook II	2
Probability and Statistics for High Energy Physics II	3
Discussion	3
Neutrino Oscillations: Introduction, Status and Outlook III	3
Introduction to Grand Unification II	3
Violations of Einstein's relativity : Motivation, theory and phenomenology II	3
Probability and Statistics for High Energy Physics III	3
Introduction to warped extradimensions and EWSB II	3
Quantum Field Theory on the Lattice II	4
Discussion	4
Introduction to Grand Unification III	4
Hadrons Physics and Continuum Strong-QCD III	4

Violations of Einstein's relativity : Motivation, theory and phenomenology III	4
Low energy QCD and chiral symmetry III	4
Introduction to warped extradimensions and EWSB III	5
Quantum Field Theory on the Lattice III	5
Discussion	5
Openning ceremony	5
Quarks, gluons and black holes	5
Transport in hot and dense nuclear matter: a string theory perspective	5
Latin American participation in intensity frontier experiments at FERMILAB	5
EWSB in a warped extra dimension	6
The future of high energy experimental physics	6
Hadrons Physics : The essence of matter	6
Soft and Hard Scale QCD Dynamics in Mesons	6
Predictions for the high density programme at LHC	6
Forward Physics Topics from RHIC to LHC	6
Using effective lagrangians to study the puzzling scalar mesons and other things	6
Lattice QCD: From Action to Hadrons	7
Latest Results from the Tevatron Collider	7
Some theory inputs and outputs for neutrino measurements	7
Neutrino Oscillations Experiments	7
Dark Matter from astrophysical measurements	7
Effective Lagrangians and New Physics	7
Physics of Gamma-Ray Bursts	8
Non perturbative physics in a Magnetic Field	8
Relativistic Dynamics in Graphene: Magnetic Catalysis and Quantun Hall Effect	8
Lorentz and CPT violation: An overview	8
The SPS Heavy ions experiments an the onset of deconfinement	8
Strong color field predictions for pp and AA collisions at LHC	8
Saturation Physics : Probes and Signatures	9

Low energy theorems for gauge bosons scattering in left-right symmetric models	9
Event Shape Analysis at LHC	9
Topics on Scalar mesons in the 1 GeV Region	9
Spin-3/2 formalism free from pathologies	9
Electromagnetic and hadronic form factors in renormalizable quantum field theories	9
The Jefferson lab Free Electron Laser Program, and energy recovery linac 4th generation light source	10
Effective gluon propagator from a Fourier transform of the cot confinement potential	10
Pion charge asymmetries in $e^+ e^- \rightarrow \pi^+ \pi^- \gamma$ below 1 GeV	10
Nonleptonic B decays to radially excited charmless mesons	10
Hadron loops in the quark model	10
Energy Loss in Strongly-Coupled gauge Theories	10
The strange asymmetry of the proton sea	11
Unexpected Nuclear Effects in Neutrino-Nucleus Interactions	11
Quark mass matrices in the physical basis	11
Abrikosov Gluon Vortices in Color Superconductors	11
Chiral shift in dense relativistic matter in magnetic field	11
Mass Dependence of the effective action in gauge-theories	11
The rates of non leptonic weak processes in spin one superconducting quark matter	11
Interplay between temperature, Magnetic Field and the Dynamical Masses	12
Fermion condensates in external magnetic field in low dimensions	12
Gribov horizon : a pathway to confinement	12
The operator product expansion beyond perturbation theory in QCD	12
Manifestation of conformal symmetry in the spectra of light flavor baryons	12
Recent results using optimized perturbation theory	12
The pion form factor in an NJL model	12
The $1/N_c$ expansion at hadronic level	12
Antiferromagnets at low temperatures	13
Chiral symmetry on the lattice	13
Effective gluon propagator from a Fourier transform of the cot confinement potential	13

Multi Higgs Model in 4D and 5D	13
Supersymmetry and Lorentz violation in 5D	13
Fermion spectrum in the Randall-Sundrum model	13
CP asymmetry in B decays and physics beyond the Standard Model	13
Search for s-quarks, gluinos and HSCPs in the CMS experiment	13
Anomalies, Beta Functions and Supersymmetric Unification with Multi-Dimensional Higgs Representations	13
The local structure of extra dimensional theories	14
Some extensions of the Higgs sector and phenomenology of the charged Higgs as a signal of new physics	14
CP violation of the neutral Higgs boson in a THDM and MSSM	14
Universal mass texture and quark-lepton complementarity	14
A minimal S_3 invariant extension of the standard model: an update	14
Chaos in the Gauge/Gravity correspondence	14
Two universal string predictions for heavy ions collisions	14
Holography and transport at strong coupling	14
A tail of a quark in $N=4$ SYM	15
Black hole / string ball production, possibly at LHC	15
Effects of brane-flux transitions on string vacua	15
Radiative correction in QED in a Lorentz violating background	15
Relativity tests and their Motivation	15
A theory of gravity from spontaneous Lorentz violation	15
NS5 branes on the resolved Y_{pq}	15
Lorentz violation on the primordial Baryogenesis	15
Noncommutative gravity from a deformation of a gauge theory	15
Anisotropic mechanics	16
Energetic neutrons from solar flares, a tool to study particle acceleration at the sun	16
The Pierre Auger observatory: status and results	16
HAWC the gamma ray observatory at Sierra Negra Mexico	16
Development of a cosmic ray detector ACORDE	16

GRB and HAWC	16
Exotic signals in cosmic ray physics	16
Neutrino mass measurements with beta decay experiments	16
Neutrino cross section measurement in miniboone experiment	16
Neutrino mixing and mass model	17
A New strategy for direct measurement of majorana effective neutrino masses	17
Neutrino Detectors for Reactor Monitoring: the Angra Project	17

Hadron and LHC Physics II / 4**Effective gluon propagator from a Fourier transform of the cot confinement potential****Author(s):** Dr. COMPEÁN JASSO, Clifford Benjamín¹**Co-author(s):** Dr. KIRCHBACH, Mariana²¹ *Dep Fis-Mat, UASLP*² *IF, UASLP***Corresponding Author(s):** cliffor@ifisica.uaslp.mx,cliffor1@hotmail.com

We transform the cot potential to momentum space by employing its property of being a harmonic angular function on the three-dimensional hypersphere S^3 and we prove the invertibility of the transformation.

25**Introduction to Grand Unification I**Dr. DIENES, Keith¹¹ *U. Arizona***Minicourses session I / 26****Hadrons Physics and Continuum Strong-QCD I**Dr. ROBERTS, Craig¹¹ *Argonne National Laboratory***Minicourses session I / 27****Low energy QCD and chiral symmetry I**Dr. SCHECHTER, joseph¹¹ *Syracuse university***Minicourses session I / 28****Probability and Statistics for High Energy Physics I**Dr. MAGNIN, Javier¹¹ *Brazilian Center for Research in Physics***Minicourses session I / 29****Introduction to warped extradimensions and EWSB I**Dr. GHERGETTA, Tony¹¹ *Melbourne University*

Minicourses session I / 30

Quantum Field Theory on the Lattice I

Dr. BIETENHOLZ, Wolfgang¹

¹ *ICN, UNAM*

Minicourses session I / 31

Discussion

Minicourses session II / 32

Neutrino Oscillations: Introduction, Status and Outlook I

SHAEVITZ, Michael¹

¹ *Columbia University*

Minicourses session II / 34

Hadrons Physics and Continuum Strong-QCD II

Dr. ROBERTS, Craig¹

¹ *Argonne National Laboratory*

Minicourses session II / 35

Violations of Einstein's relativity : Motivation, theory and phenomenology I

LEHNERT, Ralf¹

¹ *ICN, UNAM*

Minicourses session II / 36

Low energy QCD and chiral symmetry II

Dr. SCHECHTER, joseph¹

¹ *Syracuse university*

Minicourses session II / 37

Neutrino Oscillations: Introduction, Status and Outlook II

SHAEVITZ, Michael¹

¹ *Columbia University*

Lecture 2: Current Oscillation Results and Interpretations - Solar and Kamland Neutrino Results

Minicourses session II / 38

Probability and Statistics for High Energy Physics II

Dr. MAGNIN, Javier¹

¹ *Brazilian Center for Research in Physics*

Minicourses session II / 39

Discussion

Minicourses session III / 40

Neutrino Oscillations: Introduction, Status and Outlook III

SHAEVITZ, Michael¹

¹ *Columbia University*

41

Introduction to Grand Unification II

Dr. DIENES, Keith¹

¹ *U. Arizona*

Minicourses session III / 42

Violations of Einstein's relativity : Motivation, theory and phenomenology II

LEHNERT, Ralf¹

¹ *ICN, UNAM*

Minicourses session III / 43

Probability and Statistics for High Energy Physics III

Dr. MAGNIN, Javier¹

¹ *Brazilian Center for Research in Physics*

Minicourses session III / 44

Introduction to warped extradimensions and EWSB II

Dr. GHERGETTA, Tony¹

¹ *Melbourne University*

Minicourses session III / 45

Quantum Field Theory on the Lattice II

Dr. BIETENHOLZ, Wolfgang¹

¹ *ICN, UNAM*

Minicourses session III / 46

Discussion

47

Introduction to Grand Unification III

Dr. DIENES, Keith¹

¹ *U. Arizona*

Minicourses session IV / 48

Hadrons Physics and Continuum Strong-QCD III

Dr. ROBERTS, Craig¹

¹ *Argonne National Laboratory*

Minicourses session IV / 49

Violations of Einstein's relativity : Motivation, theory and phenomenology III

LEHNERT, Ralf¹

¹ *ICN, UNAM*

Minicourses session IV / 50

Low energy QCD and chiral symmetry III

Dr. SCHECHTER, joseph¹

¹ *Syracuse university*

Minicourses session IV / 51

Introduction to warped extradimensions and EWSB III

Dr. GHERGETTA, Tony¹

¹ *Melbourne University*

Minicourses session IV / 52

Quantum Field Theory on the Lattice III

Dr. BIETENHOLZ, Wolfgang¹

¹ *ICN, UNAM*

Minicourses session IV / 53

Discussion

54

Openning ceremony

Dr. AYALA, Alejandro¹

¹ *Instituto de Ciencias Nucleares, UNAM*

Review Session I / 55

Quarks, gluons and black holes

Dr. MATEOS, David¹

¹ *ICREA & University of Barcelona*

Review Session I / 56

Transport in hot and dense nuclear matter: a string theory perspective

Dr. STARINETS, Andrei¹

¹ *Oxford University*

Review Session II / 57

Latin American participation in intensity frontier experiments at FERMILAB

Review Session II / 58**EWSB in a warped extra dimension**Dr. GHERGETTA, Tony¹¹ *Melbourne University***Hadron and LHC Physics I / 59****The future of high energy experimental physics**Dr. PAIC, Guy¹¹ *Instituto de Ciencias Nucleares UNAM***Review Session III / 60****Hadrons Physics : The essence of matter**Dr. ROBERTS, Craig¹¹ *Argonne National Laboratory***Review Session III / 61****Soft and Hard Scale QCD Dynamics in Mesons**Prof. TANDY, Peter¹¹ *Kent State University***Review Session IV / 62****Predictions for the high density programme at LHC****Author(s):** Prof. PAJARES, Carlos¹**Co-author(s):** Prof. PAJARES, Carlos ²¹ *U. Santiago de Compostela*² *Professor***Review Session IV / 63****Forward Physics Topics from RHIC to LHC**Dr. WHITE, Sebastian¹¹ *Brookhaven National Laboratory***Review Session V / 64**

Using effective lagrangians to study the puzzling scalar mesons and other things

Dr. SCHECHTER, joseph¹
