

The future of high energy experimental physics

Monday, 9 November 2009 16:30 (0:30)

Abstract content

Summary

The immediate future of High energy physics is of course well determined by the Large Hadron collider of which will be given a short review. However the high energy community is very much involved in different programs of accelerator and non accelerator physics. The main projects will be reviewed and analyzed for their significance in the immediate future for experimentalists mainly in the Latin America.
