

Gribov horizon : a pathway to confinement

Thursday, 12 November 2009 16:30 (1:00)

Abstract content

Summary

BRST symmetry and Gribov horizon are important features of Yang-Mills theories, and might provide a pathway to confinement. In this talk we present a non-technical review of recent works as well as of the on-going debate.

Presenter(s) : Prof. SORELLA, Silvio Paolo (Theoretical Physics Dept., State University of Rio de Janeiro, UERJ, Brazil)

Session Classification : Non perturbative methods in FT II
