

Introduction to warped extradimensions and EWSB III

Sunday, 8 November 2009 15:00 (1:00)

Abstract content

Summary

I will give an introduction to the physics of a warped extra dimension and the AdS/CFT correspondence, outlining an AdS/CFT dictionary which leads to a 4D holographic view of the 5th dimension. This will then be used to explain the hierarchies associated with electroweak symmetry breaking and the fermion masses.
