## Fermion spectrum in the Randall-Sundrum model

Monday, 9 November 2009 19:00 (1:00)

## Abstract content

## Summary

We study the spectrum of an extension of the SM within the context of the Randall-Sundrum Model. We focus on obtaining analytical expression for the one, two and three family cases. LFV process are also revised, for an scenario where the Higgs boson is localized at the IR-brane.
