

Readiness and Potential of the bakelite RPC Lab at Ecocampus Valsequillo, BUAP

Content

A review on the bakelite RPC (Resistive Plate Chambers) lab's preparedness and prospects at the Ecocampus Valsequillo of the Benemérita Universidad Autónoma de Puebla (BUAP)

Summary

This presentation reviews the bakelite RPC (Resistive Plate Chambers) lab's preparedness and prospects at the Ecocampus Valsequillo of the Benemérita Universidad Autónoma de Puebla (BUAP). Beginning with a brief introduction to the bakelite RPC technology, we will highlight the lab's capability in state-of-the-art facilities, cutting-edge equipment, and an accomplished research team. We will examine the successful strides made by the lab in mastering the RPC technology, reflecting on their proficiency in addressing the inherent challenges and driving innovative solutions. Lastly, we will discuss the lab's current projects and readiness to contribute significantly to test and develop new technology.
