

# Bad Weather Aug. 21st and 22nd

Ricardo Sato

Pierre Auger Observatory - Malargue

Aug. 29th, 2023

Rain all the day and night (quite intense rain).

- access to many regions in the array would become difficult

Snow all the day.

- a little more than 20cm in Malargue.
- No Battery charge for two consecutive days.
- Send a program to check battery voltage and self shutdown.
  - Expect to implement this feature in the UUB-DAQ.
  - Try to avoid a problem in the UUB (e-fuse).
  - Send a Hi Priority message before shutdown.
- About 150 Stations shutdown.
- Power cut in Malargue.

Many problems to move in Malargue.

- In most of the SD stations the electronics recovered by themselves (features of UUB-DAQ software version v128r0b0p20).
- Power cut in Los Leones, Los Morados and Loma Amarilla.

- Loma Amarilla - Lost communication.
  - power recovered at the end of the day and communication start to work normally.
  - BSU 35 stop to work.
- Los Morados - A power generator has been turned on and could SD could operate normally.
- Los Leones - Power has been recovered at the end of the day.

- Trip to the field: it is still very difficult to move around
- BSU 35 has been fixed.
