~1200 members

- LSST data holders
- Interested in working with DESC

DESC Meeting
ETH Zürich 2024

Science objectives

Given the Dark Energy equation of state parametrization

$$w(a) = w_0 + (1 - a)w_a$$

where $w = -1$ corresponds to a cosmological constant.

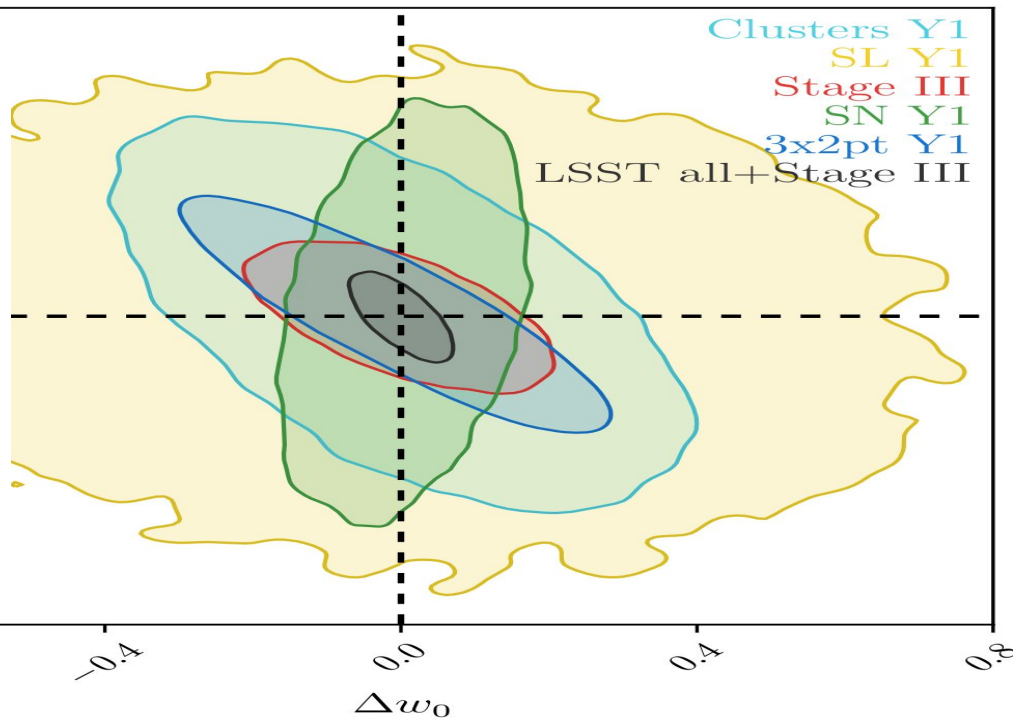

$$\sigma(w_0) = 0.02 \text{ and } \sigma(w_a) = 0.14$$

For Y1

DESC Y1 forecast

DESI found a deviation from the cosmological constant up to 3.9σ

Probes

- Weak lensing
- Strong lensing
- Large scale structure
- Galaxy clusters
- Supernovae

DC2 simulation
LSST DESC 2020

Cosmological expansion

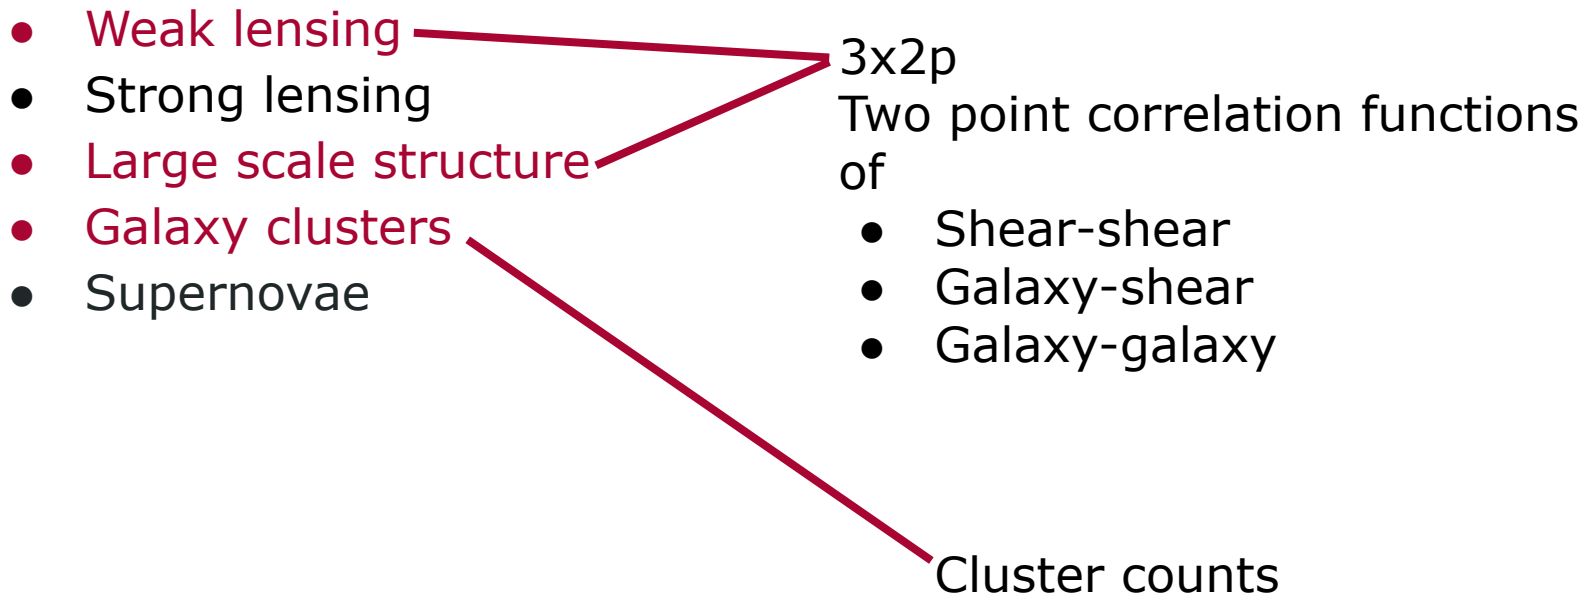

- Weak lensing
- Strong lensing
- Large scale structure
- Galaxy clusters
- Supernovae

Quasar or supernovae time delays measure H_0 directly

~112 000 SNIa
(current catalogs ~2000)

DC2 simulation
LSST DESC 2020

Structure growth

DC2 simulation

$$\zeta(\theta_1, \theta_2; \nu) = \langle X(\nu)X(\nu + \theta_1)X(\nu + \theta_2) \rangle_c.$$

Photometric redshifts

JDS, David Márquez -- Cinvestav

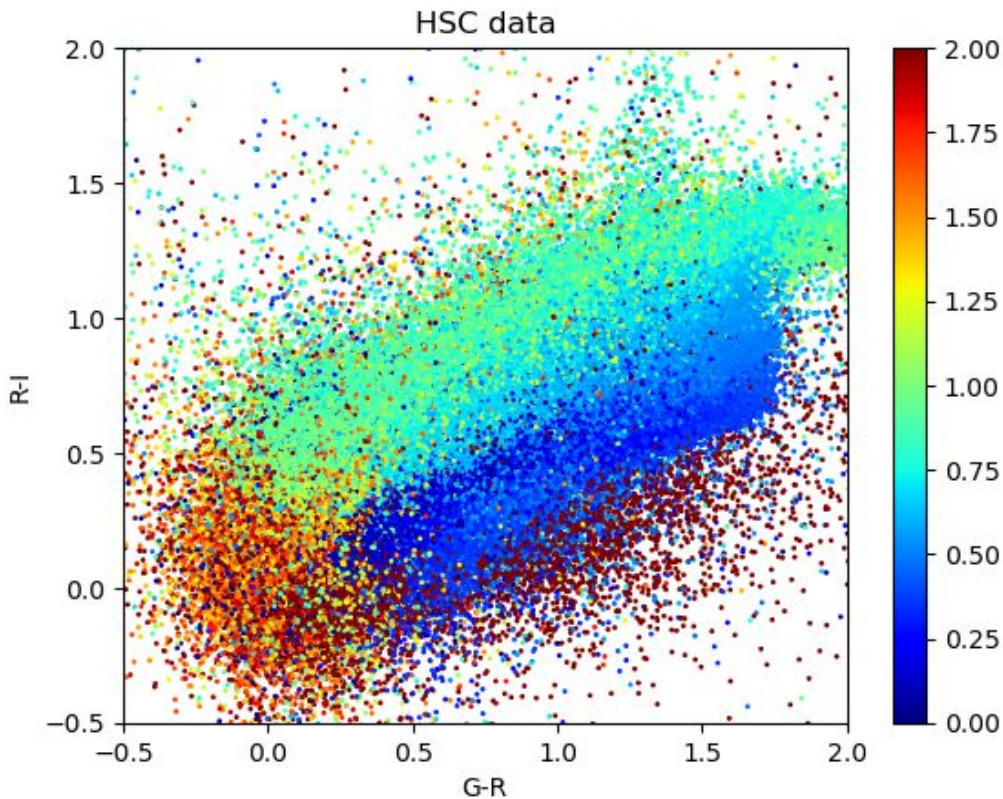

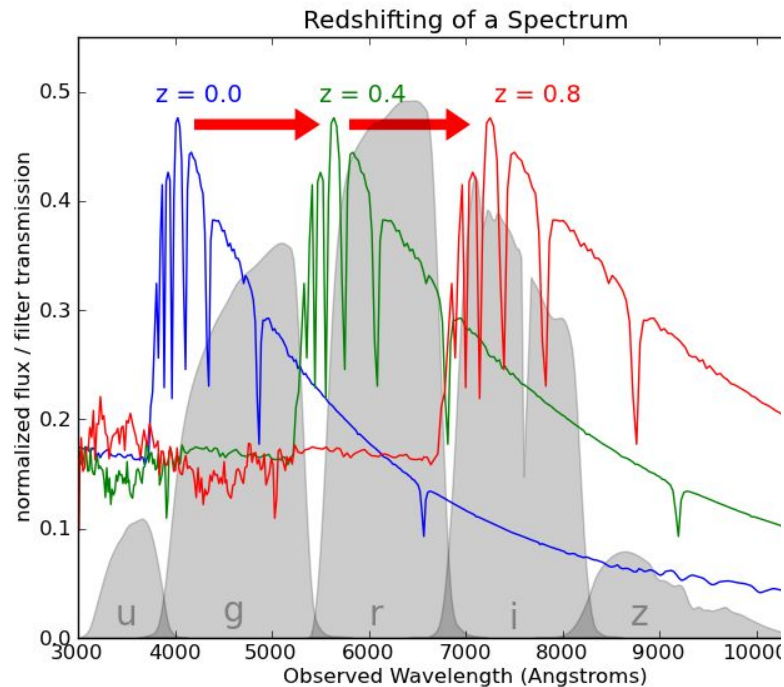

$$z = \frac{\lambda_{obs} - \lambda_{emit}}{\lambda_{emit}}$$

Photometric redshifts

Colors to redshifts

Cross correlation techniques

David Marquez MSc thesis

Galaxies with known z

Galaxies with unknown z

Cross correlation techniques

David Marquez MSc thesis

Low correlation means different z

High correlation means the same z

Lots of work ahead
Thanks!

$z=.05$

$z=.15$
