Overview

- Why is strong-field physics important?
- Interplay between strong magnetic fields and QCD.

・ロト ・ 日 ・ ・ ヨ ・ ・ ヨ ・ うへで

- Linear sigma model with quarks (LSMq)
- Analysis of the neutral pion screening mass
- Results
- Summary and perspectives

Strong-(Electromagnetic)Field Physics

- High energy physics (heavy ion collisions)
- Astrophysics (neutron stars)

Strong-Field Physics

Figure: magnetar $(10^{13} - 10^{15} \text{ G.})$

Figure: Heavy ion collisions $(10^{18} - 10^{19} \text{ G.})$

4/41

æ

Comparison of different magnetic fields

- Earth's magnetic field: 0.6 G
- Common comercial magnet: 100 G
- Strongest magnetic field produced in labs: $4.5 \times 10^5 G$
- Magnetars: $(10^{13} 10^{15})G$
- Heavy ion collisions: $(10^{18} 10^{19}) G$

Interplay between strong magnetic fields and QCD

- Magnetic catalysis at zero temperature.
- Inverse magnetic catalysis around T_C.
- Chiral magnetic effect.
- Electromagnetic fields provide a powerful probe to explore the properties of the QCD vacuum.

Since the dynamics of chiral symmetry breaking is dominated by pions, the lightest of all quark-antiquark bound states, it then becomes important to explore how the pion mass is affected by the presence of magnetic fields.

In this work we will study the effect of a constant magnetic field B in the screening mass of neutral pions.

Screening Mass

Figure: Debye mass (inverse of Debye length)

Screening Mass

< 고 > < 급 > < 돌 > < 돌 > 질 <
 < 9/41

Pole and screening masses $(B \neq 0, T = 0)$

Pole mass

$$p_0^2 - p_\perp^2 - p_3^2 - m_\pi^2 - \Re f(p_0^2, p_\perp^2, p_3^2, B)\Big|_{p_3^2 = p_\perp^2 = 0} = 0$$

Screening mass *B* breaks Lorentz invariance and defines || and ⊥
 Longitudinal

$$p_0^2 - p_\perp^2 - p_3^2 - m_\pi^2 - \Re f(p_0^2, p_\perp^2, p_3^2, B)\Big|_{p_0^2 = p_\perp^2 = 0} = 0$$

Transverse

$$p_0^2 - p_\perp^2 - p_3^2 - m_\pi^2 - \Re f(p_0^2, p_\perp^2, p_3^2, B) \Big|_{p_0^2 = p_3^2 = 0} = 0$$

$$f(p_0, p_\perp, p_\parallel, B) = \pi_{f\bar{f}} - \lim_{B \to 0} \pi_{f\bar{f}}$$

We start with the simplest case $(p_{\perp}^2 = p_0^2 = 0)$. This is the 'longitudinal' screening mass which is found by solving the equation:

$$p_0^2 - p_\perp^2 - p_3^2 - m_\pi^2 - \Re f(p_0^2, p_\perp^2, p_3^2, B)\Big|_{p_0^2 = p_\perp^2 = 0} = 0$$

$$f(0, q_3^2, 0, |q_f B|, m_f) = -4g^2 \frac{|q_f B|}{(4\pi)^2} \int_0^1 dv \int_0^\infty du e^{-u\epsilon} \\ \times \left\{ e^{-iX} \left[\frac{m_f^2 - v(1-v)q_3^2}{\tan(|q_f B|u)} \right. \\ \left. - i \left(\frac{|q_f B|}{\sin^2(|q_f B|u)} + \frac{1}{u \tan(|q_f B|u)} \right) \right] \right] \\ \left. - e^{-iX_0} \left[\frac{m_f^2 - v(1-v)q_3^2}{|q_f B|u} - \frac{2i}{|q_f B|u^2} \right] \right\} .$$

$$f(0, q_3^2, 0, |q_f B|, m_f) \equiv -\frac{4g^2}{(4\pi)^2} F(q_3^2, |q_f B|, m_f) , \qquad (2)$$

<ロ > < 団 > < 臣 > < 臣 > < 臣 > < 臣 > < 26/41

Summary and perspectives

Summary:

- ▶ We have calculated the neutral pion self-energy in the LSMq.
- We have obtained the 'longitudinal' screening mass as a function of B.
- We have compared our results with LQCD and NJL, and we have found a nice agreement only when we have a magnetic field dependence on the couplings and masses.

Perspectives:

- We are studying the 'transverse' screening mass as a function of B.
- We will study the case where $T \neq 0$.

Thank You

 Important integrals and convenient change of variables

$$\int_{-\infty}^{\infty} e^{-ax^2} dx = \sqrt{\frac{\pi}{a}}$$
$$\int_{-\infty}^{\infty} x^2 e^{-ax^2} dx = \frac{1}{2a} \sqrt{\frac{\pi}{a}}$$
