

Investigating the properties of exotic hadron states

Tuesday, 2 December 2025 14:20 (0:30)

Content

I will discuss the state-of-the-art of so-called exotic hadronic states, and how the heavy ion collisions (HICs) appear as a promising scenario to investigate their properties. In the sequence I present some of our contributions on this topic, focusing on how to distinguish the intrinsic nature of these exotic states from the relevant observables, such as their decays, multiplicities and femtoscopic correlation functions.
