## Successful ToO triggers on the extragalactic sources with the MAGIC telescope

*Friday, 6 July 2007 12:41 (0:12)*

### Abstract content

The MAGIC collaboration has been performing Target of Opportunity (ToO) observations whenever alerted that known or potential very high energy gamma-ray emitting extragalactic sources were in a high flux state in the optical, X-ray band or/and in the TeV energy range. Here we report on triggered observations, results of the analysis, and possible optical-TeV correlation seen in the data. Among other sources, detections as well as spectral and temporal characteristics of Mkn 180 and PKS 2155-304 will be reported.
