## Status of CANGAROO-III

Monday, 9 July 2007 08:54 (0:12)

### Abstract content

The CANGAROO-III telescope system for very-high-energy gamma-ray astrophysics consists of four 10-m atmospheric Cherenkov telescopes located near Woomera, South Australia. We have been observing southern-sky objects since March 2004. Here we report on the status of the system and some recent results from CANGAROO-III observations.
