## **Partial reanimation of experimental complex ANI at Mt. Aragats (proposal).**

*Friday, 6 July 2007 14:45 (0:00)*

### **Abstract content**

We present the proposal for reanimation of the half-built experimental complex ANI at Mt. Aragats (Armenia, 3200 m a.s.l.). It is proposed as a first stage to complete the functioning GAMMA installation by big X-ray emulsion chamber for detailed study of EAS cores at energies 1-100 PeV. Preliminary data obtained in this field by the Tien Shan "Hadron" installation are presented. This proposal is an EFT and requests creation of an international cooperation.
