Gamma Ray Extragalactic Excess in Coma direction

Friday, 6 July 2007 14:45 (0:00)

Abstract content

By using Egret data, considering a gamma ray flux for Virgo supercluster and a detailed analysis on our postulates, with a new method a gamma ray flux in Coma direction results. Some analogy between the works has made, is done. A flux index for Coma direction gamma rays has resulted which is in the favor of our information from Coma supercluster.
