## Observation of AE Aquarii with the MAGIC telescope

*Friday, 6 July 2007 14:45 (0:00)*

### Abstract content

In August 2005, MAGIC telescope observed the cataclysmic variable AE Aquarii. Observations were done during four consecutive nights within the context of a coordinated quasi-simultaneous multiwavelength campaign covering radio, optical, UV, and X-ray range. We report on the results of this campaign.
