## Chemical composition of cosmic rays at the knee measured by the Tibet air-shower-core detector.

*Wednesday, 4 July 2007 12:29 (0:12)*

### Abstract content

Further analysis is made on the Tibet hybrid experiment to measure the energy spectrum of light component (proton and helium) of the cosmic rays at the knee. The result from three years observation by the burst detectors operated with Tibet III air-shower array is presented and compared with the result of the first phase experiment.
