A Geant4 based engineering tool for Fresnel lenses

Monday, 9 July 2007 14:45 (0:00)

Abstract content

Geant4 is a Monte Carlo radiation transport toolkit of generalized application in areas such as high-energy physics, nuclear physics, astroparticle physics, or medical physics. Geant4 provides an optical physics process category, allowing the simulation of the production and propagation of light. Such capabilities are well tailored for the simulation of optics systems namely in cosmic-rays experiments based on the detection of the EAS Cherenkov and fluorescence light. The use of Geant4 as an engineering tool for the optics design and simulation of Fresnel-lens based detectors will be presented.
