1-100TeV Gamma Ray Astronomy with Atmospheric Cherenkov Telescopes

Monday, 9 July 2007 14:45 (0:00)

Abstract content

Recent discoveries in gamma ray astronomy at a few 100GeV provide many motivations for extending our coverage of the gamma ray sky to higher energies, up to several 100TeV. After reviewing these motivations we will present simulation-based considerations to drive the design of arrays of Atmospheric Cherenkov telescopes to obtain relevant sensitivity from a few TeV to a few 100TeV.
