## Characteristic Features of the 11-Year Cycle in Cosmic Ray Data\*

*Monday, 9 July 2007 14:45 (0:00)*

### Abstract content

Past works suggest the existence of several periodicities in cosmic ray data. Nevertheless, the reliability of the obtained periods is not often faced. In this paper, neutron monitor and IMP data were analysed by using the Fast Fourier Transform and Wavelet techniques to determine the reliability of each identified medium- and long-term periodicity. Moreover, their relevance is analysed along the solar cycle evolution to better understand their role in the 11-year cosmic ray cycle.
