## Magnetic Fields of the Milky Way

*Thursday, 5 July 2007 11:18 (0:12)*

### Abstract content

We report on a project to constrain the large-scale and turbulent magnetic fields of the Milky Way galaxy, which eventually will incorporate all of the relevant observational data. The initial work is based primarily on the WMAP3 polarization and intensity maps, plus a large number of galactic and extragalactic point source Faraday Rotation Measures. Preliminary results on the Galactic magnetic field are presented, and consistency with UHECR small-scale anisotropies is discussed.
