Search for gamma-ray emission from the Supernova Remnants W66, W44 and IC443 with the MAGIC Telescope

Wednesday, 4 July 2007 13:05 (0:12)

Abstract content

SNRs in general, and in particular, those SNRs which might be physically related with EGRET sources were chosen as a target for observations with the MAGIC telescope. Here we report about the searches for VHE gamma-ray emission from the SNRs IC443, W66 and W44. We briefly describe the observational strategy, the procedure implemented for the data analysis, and discuss the results.
