## Search for large scale anisotropies at energies above 1 EeV with the Auger Observatory.

*Wednesday, 4 July 2007 12:55 (0:10)*

### Abstract content

We use more than two years of data from the Pierre Auger Observatory to search for anisotropies on large scales in different energy windows above 1 EeV. We account for various systematics in the acceptance, in particular due to weather variations. We present the results of analyses and consistency checks looking for patterns such as right ascension modulations.
