The ankle in the UHE Cosmic Ray Spectrum

Saturday, 7 July 2007 09:10 (0:12)

Abstract content

A variety of mdoels for the origin of Extragalactic Cosmic Rays have been examined in an attempt to see whether it is possible to explain the ankle in the spectrum as a property of the EG particles alone. We find that it is not and see no reason to doubt that it marks the cross-over point between Galactic and EG particles.
