Status of Super-Kamiokande and early data from SK-III

Saturday, 7 July 2007 12:53 (0:12)

Abstract content

Fully reconstruction works of Super-Kamiokande, a large water cherenkov detector, has been done in 2006 and data taking has been started from July 06' as SK-III with 11126 20inch PMTs. Calibration works were successfully done and now we are going to step into analysis stage. In this talk, I will show the calibration data and some early data for atmospheric neutrino and solar neutrino from SK-III.
