Performance of the IceTop array

Thursday, 5 July 2007 09:20 (0:12)

Abstract content

The surface air-shower array above the IceCube neutrino telescope now consists of 52 ice Cherenkov tanks at 26 stations spread over an area of 0.22 square kilometer. This paper reports on experience with deployment and operation of IceTop and describes data that verify the performance, threshold and energy response of the array.
