Analysis of the Arrival Time of Successive Air Showers by using Erlang Distribution

Wednesday, 4 July 2007 14:45 (0:00)

Abstract content

We analyze arrival time of air shower using Hirosaki AS Arrays. This array consists of 5 scintillation detectors with GPS antenna for arrival times. We use Erlang Distribution. The number of air showers observed within short time windows is analized by using arrival time difference of k-events serial air showers. We report the results of the analysis.
