## Cosmic Rays and Global Warming

*Saturday, 7 July 2007 09:42 (0:12)*

### Abstract content

It has been claimed (Szensmark, 2007, and others) that observed correlations of terrestrial cloud cover with 'the cosmic ray intensity' are casual. The possibility arises, therefore of a connection between cosmic ray intensity and Global Warming. If true, the implications would be very great. An examination of the situation is made.
