# 30th International Cosmic Ray Conference

## Thursday 05 July 2007

### **OG 1.1, OG 1.2 - Uxmal + Tulum (Holiday Inn) (08:30-10:00)**

| time  | title                                                                                                                          | presenter            |
|-------|--------------------------------------------------------------------------------------------------------------------------------|----------------------|
| 08:30 | Cosmic Ray Energetics And Mass (CREAM) Overview                                                                                | SEO, Eun-Suk         |
| 08:42 | The Physics of Pamela Space Mission                                                                                            | PICOZZA, Piergiorgio |
| 09:06 | Isotopic composition of cosmic ray sources                                                                                     | MOSKALENKO, Igor     |
| 09:18 | Can solar $^6\text{Li}$ abundance really be explained by Galactic cosmic-rays?                                                 | PRODANOVIC, Tijana   |
| 09:30 | CAN $^{59}\text{Ni}$ SYNTHESIZED IN OB ASSOCIATIONS DECAY TO $^{59}\text{Co}$ BEFORE BEING ACCELERATED TO COSMIC-RAY ENERGIES? | BINNS, W. R.         |
| 09:42 | Spectrum of Cosmic Rays, produced in Supernova Remnants                                                                        | BEREZHKO, Evgeny     |
