

FIRST REPORT OF ACTIVITIES AT CERN.

Antonio Ortiz Velasquez.
ICN-UNAM-Mexico

ICN Meeting.

September 6th, 2007

***This work was supported by ALFA-EC funds in the framework of Program HELEN (High Energy Physics Latinoamerican European Network).**

Homeworks at CERN:

- Learn to use ALIROOT.
- Work in the last tests of ACORDE.

1. Learn how to run PYTHIA generator.

- GENERATION
- pp collisions at: $\sqrt{s} = 900 \text{ GeV}$ and $\sqrt{s} = 14 \text{ TeV}$.
- Process type: kPyMb (Minimum bias).
- Number of events: 10000

- GENERATE THE FOLLOWING PLOTS:

$$\frac{dn}{dP_T} \text{ vs. } P_T \quad \frac{dn}{d\eta} \text{ vs. } \eta$$

n : Number of primary charged particles.

η : pseudorapidity

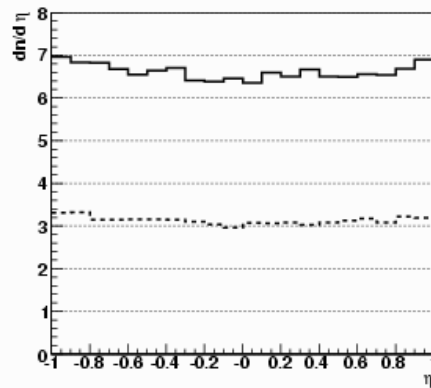

P_T : Transverse Moment

- Make some comparisons.

Upper plots: Comparison considering all charged particles produced by collision.

bottom plots: Comparison considering pions + produced by collision with pseudorapidity: $-1 \leq \eta \leq 1$.

All charged particles

All charged particles

— 14 TeV
- - - 900 GeV
All η

π^+

π^+

— 14 TeV
- - - 900 GeV
-1 $\leq \eta \leq 1$

Upper plots: Comparison considering kaons + produced by collision with pseudorapidity: $-1 \leq \eta \leq 1$

bottom plots: Comparison considering pions - produced by collision with pseudorapidity: $-1 \leq \eta \leq 1$

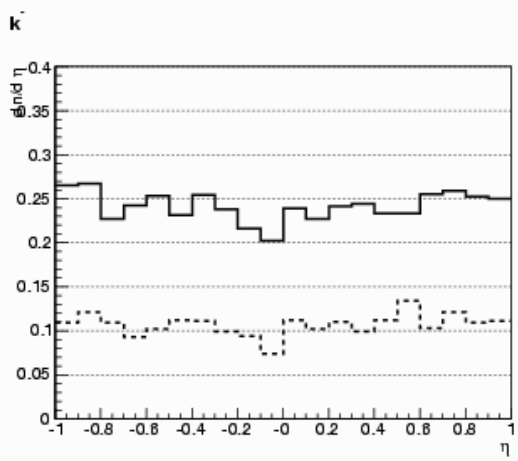

— 14 TeV
- - - 900 GeV

$-1 \leq \eta \leq 1$

Upper plots: Comparison considering kaons - produced by collision with pseudorapidity: $-1 \leq \eta \leq 1$

bottom plots: Comparison considering protons + produced by collision with pseudorapidity: $-1 \leq \eta \leq 1$

— 14 TeV
- - - 900 GeV

$-1 \leq \eta \leq 1$

Comparison considering protons - produced by collision with pseudorapidity: $-1 \leq \eta \leq 1$

— 14 TeV
- - - 900 GeV
 $-1 \leq \eta \leq 1$

Comparison of dn/dp_T for different cuts of η

$-\leq \eta \leq 1$

— 14 TeV
- - - 900 GeV

All η

⋯ 900 GeV
⋯ 14 TeV

For pions, kaons, protons generated by collision, these plots show the ratio:

$$\left(\frac{dn}{dP_T} \right)_{14 \text{ TeV}} / \left(\frac{dn}{dP_T} \right)_{900 \text{ TeV}}$$

With the cut: $|\eta| \leq 1$

All charged particles, 14TeV

**Comparison
between rapidity
and pseudorapidity.**

π^+ , 14TeV

Report of ACORDE activities:

- I am collaborating in the detection of problems of ACORDE.
- I am learning to use the DAQ system.

Next work:

- Reconstruct the same events and make comparison between generated and reconstructed data.
- Next week Revol will give me a concret physics problem.
