

The HAWC Gamma Ray Observatory

Tuesday, 4 November 2014 13:45 (0:45)

Abstract content

We will present the HAWC Gamma Ray Observatory, located on the slopes of the volcano Sierra Negra in Mexico at an altitude of 4100m asl. The observatory is currently in the final stage of construction. The modular nature of the observatory allowed the beginning of commissioning and operation. We will present the current status and outlook. We will also look at the challenges in computing and data handling of the project.

Summary

Presenter(s) : Dr. SANDOVAL, Andres Sandoval (Instituto de Fisica, UNAM)

Session Classification : Session 3
